Industrial
MICRO SD Memory Card

S-300u Series
SPI, SD and SDHC compliant

S-300u SERIESMICRO SD Memory Card

1 Feature summary

- Highly-integrated memory controller
 - Fully compliant with SD Memory Card specification SD1.01, SD1.1, SD2.0 and SD3.01 and MICRO SD Memory Card Addendum 4.00
- Standard MICRO SD Memory Card form factor
 - o 15.0mm x 11.0mm x 0.7mm
- Operating voltage 2.7...3.6V
- Low-power CMOS technology
- High reliability
 - MTBF: > 3,000,000 hours
 - Number of insertions: > 10,000
 - Extended Temperature range -25° up to 85°C
 - Industrial Temperature range -40° up to 85°C
- Hot swappable
- High performance
 - Speed class
 - 2GB Card class 6
 - 4GB to 8GB class 10
 - SD burst up to 25MB/s
 - SD Low speed o...25MHz clock rate
 - SD High speed 25...50MHz clock rate
 - Flash burst up to 40MB/s
 - o Flash Bus interleave
- Operating bus modes: SD 1 & 4bit and SPI
- Error Correction up to 24bit/1KB BCH ECC
- Wear Leveling: equal wear leveling of static and dynamic data

The wear leveling assures that dynamic data as well as static data is balanced evenly across the memory. With that the maximum write endurance of the device is guaranteed.

- Write Endurance: Due to advanced wear leveling an even use of the entire flash is guaranteed, regardless how much "static" (OS) data is stored. Example: If the average file size is 10MByte and the total capacity is 8GByte, 48Mio write cycles can be performed.
- Available densities
 - o 2, 4 and 8GBytes (SLC NAND Flash)
- Controlled BOM
- Life Cycle Management

4 Product Specification

The MICRO SD Memory Card is a small form factor non-volatile memory card which provides high capacity data storage. Its aim is to capture, retain and transport data, audio and images, facilitating the transfer of all types of digital information between a large variety of digital systems.

The card operates in two basic modes:

- SD/SDHC card mode
- SPI mode

The MICRO SD Memory Card also supports SD **High Speed mode** with up to 50MHz clock frequency.

The cards are compliant with

- SD Memory card Specification Part 1, Physical layer Specification V3.01
- SD Memory card Specification Part 2, File System Specification V3.00
- SD Memory card Specification Part 3, Security Specification V3.00
- MICRO SD Memory Card Addendum V4.00

Simplified specifications are available at https://www.sdcard.org/downloads/pls/simplified specs/

The Card has an internal **intelligent controller** which manages interface protocols, data storage and retrieval as well as hardware **BCH Error Correction Code (ECC)**, **defect handling**, **diagnostics and clock control**. The **advanced wear leveling** mechanism assures an equal usage of the Flash memory cells to extend the life time. The hardware BCH-code ECC allows to **detect and correct up to 24 defect bits per 1kByte**.

The card has a **power-loss management feature** to prevent data corruption after power-down. The power consumption is very low.

The cards are RoHS compliant and lead-free.

4.1 System Performance

Table 3: Performance

System Performance	typ	max	Unit	
Burst Data transfer Rate (max SD clock 50MHz)			25	
Sustained Sequential Dead	2GB	19 ⁽¹⁾⁽²⁾	24 ⁽¹⁾⁽³⁾

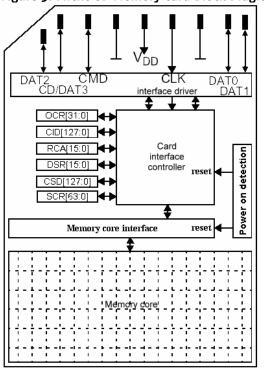

Figure 4: MICRO SD Memory Card Shape and Interface (Bottom View)

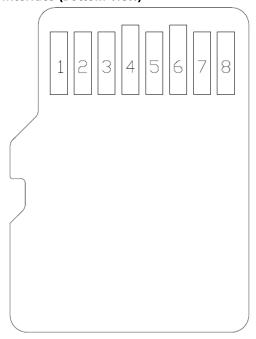

Table 11: MICRO SD Memory Card Pad Assignment

Pin #		11011101	SD Mode	SPI Mode			
	Name	Name Type¹ Description		Name	Type ¹	Description	
1	DAT2⁵	I/O/PP	Data Line [Bit 2]	RSV			
2	CD/DAT3 ²	I/O/PP3	Card Detect/ Data Line [Bit 3]	CS	I ³	Chip Select (negative true)	
3	CMD	PP	Command/Response	DI	I	Data In	
4	VDD	S	Supply voltage	VDD	S	Supply voltage	
5	CLK	1	Clock	SCLK	I	Clock	
6	VSS		Supply voltage ground	VSS	S	Supply voltage ground	
7	DATo		Data Line [Bit o]	DO	O/PP	Data Out	
8	DAT1 ⁴	I/O/PP	Data Line [Bit 1]	RSV			

Notes:

- 1) S: power supply; I: input; O: output using push-pull drivers; PP: I/O using push-pull drivers;
- 2) The extended DAT lines (DAT1-DAT3) are input on power up. They start to operate as DAT lines after SET_BUS_WIDTH command. The Host shall keep its own DAT1-DAT3 lines in input mode, as well, while they are not used.
- 3) At power up this line has a 50k0hm pull up enabled in the card. This resistor serves two functions Card detection and Mode Selection. For Mode Selection, the host can drive the line high or let it be pulled high to select SD mode. If the host wants to select SPI mode it should drive the line low. For Card detection, the host detects that the line is pulled high. This pull-up should be disconnected by the user, during regular data transfer, with SET_CLR_CARD_DETECT (ACMD42) command
- 4) DAT1 line may be used as Interrupt Output (from the Card) in SDIO mode during all the times that it is not in use for data transfer operations (refer to "SDIO Card Specification" for further details).
- 5) DAT2 line may be used as Read Wait signal in SDIO mode (refer to "SDIO Card Specification" for further details).

7.2 DC characteristics

Measurements are at Recommended Operating Conditions unless otherwise specified.

Table 12: DC Characteristics

Symbol	Parameter	min	typ	max	unit	notes
	Peak Voltage on all Lines	-0.3		VDD+o.3	V	
VIL	Input LOW Voltage	-0.3		0.25*VDD	V	
VIH	Input HIGH Voltage	0.625*VDD		VDD+o.3	V	
VOL	Output LOW Voltage			0.125*VDD	V	@ 100µA
VOH	Output HIGH Voltage	0.75*VDD			V	@ 100µA
	Operating Current Read		50	60	mA	@ 25°C
	Operating Current Write		60	70	mA	@ 25°C
IDD	Pre-initialization Standby Current		150	200	μA	@ 25°C
	Post-initialization Standby Current		130	150	μA	@ 25°C
	Post-initialization standby current		400	600	μΑ	@ 85°C
ILI	Input Leakage Current	-10		10	μA	without
IL0	Output Leakage Current	-10		10	μA	pull up R

Table 13: MICRO SD Memory Card Recommended Operating Conditions

Symbol		min	typ	max	unit

-	Power Up Time (from oV to VDD min)			250	ms

7.3 Signal Loading

The total capacitance C_L is the sum of the bus master capacitance C_{HOST} , the bus capacitance C_{BUS} , and the capacitance C_{CARD} of the card connected to the line:

 $C_L = C_{HOST} + C_{BUS} + C_{CARD}$ To allow the sum of the host and bus capacitances to be up to 20pF for the card, the following conditions in the table below are met by the card.

Table 14: Signal loading

Parameter	Symbol	Min	Max	Unit	Notes
Pull up resistance	R_{CMD}	10	100	k0hm	To prevent bus floating
Pull up resistance	R_{DAT}	10	100	k0hm	To prevent bus floating
Bus signal line capacitance	C_{L}		40	pF	Single card

Clock rise time	tTLH		10/50	ns	CL>100/250p1
Clock fall time	tTHL		10/50	ns	
CMD, DAT input setup time	tISU	5		ns	CL≤25pF
CMD, DAT input hold time	tIH	5		ns	CL_25pi
CMD, DAT output delay time	tODLY	0	14	ns	CL≤25pF, data transfer
CMD, DAT output delay time	tODLY	0	50	ns	CL≤25pF, identification

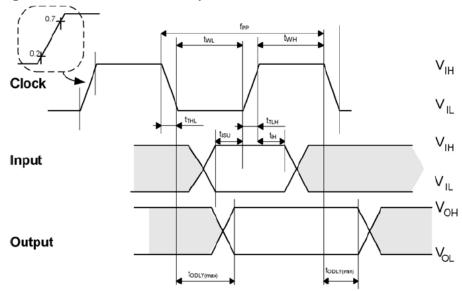

Card

Notes

- 1. Rise and fall times are measured from 10% to 90% of voltage level.
- 2. CLK referenced to VIH min and VIL max.
- 3. CMD and DAT inputs and outputs referenced to CLK.
- 4. oHz means to stop the clock. The given minimum frequency range is for cases where a continuous clock is required
- 5. Specified for one card

Figure 6: AC Characteristics Low Speed Mode

Shaded areas are not valid

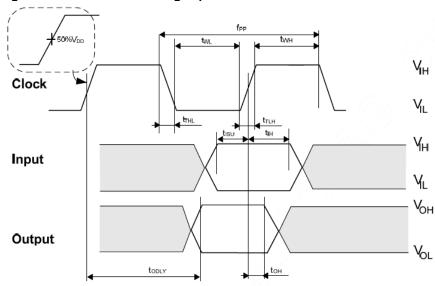

Table 16: AC Characteristics High Speed Mode

Table for he characteristics in 611 speed Flode								
Parameter	Symbol	Min	Max	Unit	Notes			
Clock frequency in data transfer mode	fPP	0	50	MHz				
Clock low time	tWL	7.0		ns				
Clock high time	tWH	7.0		ns				
Clock rise time	tTLH		3	ns				
Clock fall time	tTHL		3	ns	CL≤10pF			
CMD, DAT input setup time	tISU	6		ns	CL-10pi			
CMD, DAT input hold time	tIH	2		ns				
CMD, DAT output delay time during data	tODLY		1/.	ns				
transfer mode	LUDLI		14	115				
CMD, DAT output hold time	t0H	2.5		ns				

Notes

- 1. Rise and fall times are measured from 10% to 90% of voltage level.
- 2. CLK referenced to VIH min and VIL max.
- 3. CMD and DAT inputs and outputs referenced to CLK.
- 4. In order to satisfy severe timing, the host shall drive only one card with max 4opF total at each line.

Figure 7: AC Characteristics High Speed Mode

Shaded areas are not valid

8 Host access Specification

The following chapters summarize how the host accesses the card:

- Chapter 8.1 summarizes the SD and SPI buses.
- Chapter 8.2 summarizes the registers.

8.1 SD and SPI Bus Modes

The card supports SD and the SPI Bus modes. Application can chose either one of the modes. Mode selection is transparent to the host. The card automatically detects the mode of the reset command and will expect all further communication to be in the same communication mode. The SD mode uses a 4-bit high performance data transfer, and the SPI mode provides compatible interface to MMC host systems with little redesign, but with a lower performance.

8.1.1 SD Bus Mode Protocol

The SD Bus mode has a single master (host) and multiple slaves (cards) synchronous topology. Clock, power, and ground signals are common to all cards. After power up, the SD Bus mode uses DATo only; after initialization, the host can change the cards' bus width from 1 bit (DATo) to 4 bits (DATo-DAT3). In high speed mode, only one card can be connected to the bus.

Communication over the SD bus is based on command and data bit streams which are initiated by a start bit and terminated by a stop bit.

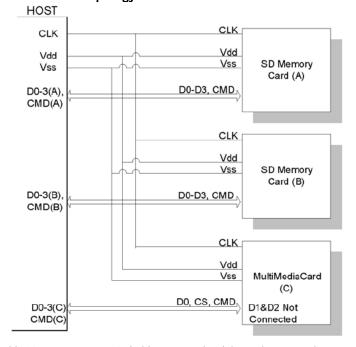

- Command: a command is a token which starts an operation. A command is sent from the host either to a single card (addressed command) or to all connected cards (broadcast command). A command is transferred serially on the CMD line.
- Response: a response is a token which is sent from an addressed card, or (synchronously) from all
 connected cards, to the host as an answer to a previously received command. A response is transferred
 serially on the CMD line.
- Data: data can be transferred from the card to the host or vice versa. Data is transferred via the data lines.

The SD bus signals are listed in Table 17, and the SD bus topology is illustrated in Figure 8: SD Bus Topology.

Table 17: SD Bus Signals

Signal	Description
CLK	Host to card clock signal
CMD	Bidirectional Command/Response signal
DATo-DAT3	4 Bidirectional data signals
Vdd, Vss	Power and Ground

Figure 8: SD Bus Topology

8.1.2 SPI Bus Mode Protocol

The Serial Parallel Interface (SPI) Bus is a general purpose synchronous serial interface. The SPI mode consists of a secondary communication protocol. The interface is selected during the first reset command after power up (CMDo) and it cannot be changed once the card is powered on.

While the SD channel is based on command and data bit streams which are initiated by a start bit and terminated by a stop bit, the SPI channel is byte oriented. Every command or data block is built of 8-bit bytes and is byte aligned to the CS signal.

The card identification and addressing methods are replaced by a hardware Chip Select (CS) signal. There are no broadcast commands. For every command, a card (slave) is selected by asserting (active low) the CS signal. The CS signal must be continuously active for the duration of the SPI transaction (command, response and data). The only exception occurs during card programming, when the host can de-assert the CS signal without affecting the programming process.

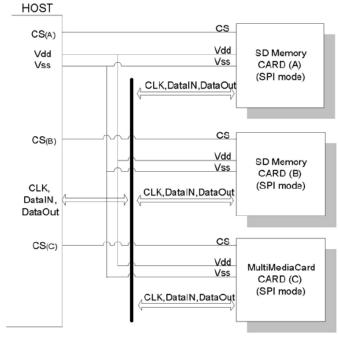

The bidirectional CMD and DAT lines are replaced by unidirectional dataIn and dataOut signals.

The SPI bus signals are listed Table 18 and the SPI bus topology is illustrated in Figure 9.

Table 18: SPI Bus Signals

Signal	Description
ICS	Host to card chip select
CLK	Host to card clock signal
Data In	Host to card data signal
Data Out	Card to host data signal
Vdd, Vss	Power and ground

Figure 9: SPI bus topology

8.1.3 Mode Selection

The SD Memory Card wakes up in the SD mode. It will enter SPI mode if the CS signal is asserted (negative) during the reception of the reset command (CMDo) and the card is in *idle_state*. If the card recognizes that the SD mode is required it will not respond to the command and remain in the SD mode.

If SPI mode is required the card will switch to SPI and respond with the SPI mode R1 response.

The only way to return to the SD mode is by entering the power cycle. In SPI mode the SD Memory Card protocol state machine is not observed. All the SD Memory Card commands supported in SPI mode are always available. During the initialization sequence, if the host gets Illegal Command indication for ACMD41 sent to the card, it may assume that the card is Multimedia Card. In that case it should re-start the card as Multimedia Card using CMD0 and CMD1.

8.2 Card Registers

The MICRO SD Memory Card has five registers. Refer to Table 19 to Table 24 for detail.

Table 19: MICRO SD Memory Card registers

Register Name	Bit Width	Description	Function				
CID	128		This register contains the card identification information used during the Card Identification phase.				
OCR			This register describes the operating voltage range and contains the status bit in the power supply.				
CSD	128		This register provides information on how to access the card content. Some fields of this register are writeable by PROGRAM_CSD (CMD27).				
SCR		SD Memory Card's Special features	This register provides information on special features.				
RCA	16	Relative Card Address	This register carries the card address is SD Card mode.				

Table 20: CID register

Register Name	Bit Width	Description	typ. value
MID	8	Manufacture ID	TBD (ox5d)
OID	16	OEM/Application ID	TBD (0x5342)
PNM	40	Product Name	TBD ("NgBWc")
			g=generation
			c=number of channels
PRV	8	Product Revision	oxgg
PSN	32	Product Serial Number	XXXXXXX
_	4	Reserved	0X0

9 **C E** Declaration of Conformity

We

Manufacturer: Swissbit AG

Industriestrasse 4 CH-9552 Bronschhofen

Switzerland

declare under our sole responsibility that the product

Product Type: MICRO SD Memory Card

Brand Name: SWISSMEMORY™ MICRO SD Memory Card

Product Series: S-300u

Part Number: SFSDxxxxNxBWxxx-x-xx-xxx

to which this declaration relates is in conformity with the following directives:

EN55022:2006 +A1:r B

FCC47 Part 15 Subpart B §15.111

EN 61000-4-2:1995 +A1:1998 + A2:2001

EN 61000-4-3:2006+A1:2008 2002/96/EC Category 3 (WEEE)

following the provisions of Directive

Electromagnetic compatibility 2004/108/EC

Restriction of the use of certain hazardous substances 2011/65/EU

Swissbit AG, February 2013

Manuela Kögel Head of Quality Management

10 RoHS and WEEE update from Swissbit

Dear Valued Customer,

We at Swissbit place great value on the environment and thus pay close attention to the diverse aspects of manufacturing environmentally and health friendly products. The European Parliament and the Council of the European Union have published two Directives defining a European standard for environmental protection. This states that CompactFlash Cards must comply with both Directives in order for them to be sold on the European market:

- RoHS Restriction of Hazardous Substances
- WEEE Waste Electrical and Electronic Equipment

Swissbit would like to take this opportunity to inform our customers about the measures we have implemented to adapt all our products to the European norms.

What is the WEEE Directive (2002/96/EC)?

The Directive covers the following points:

- Prevention of WEEE
- Recovery, recycling and other measures leading to a minimization of wastage of electronic and electrical equipment
- Improvement in the quality of environmental performance of all operators involved in the EEE life cycle, as well as measures to incorporate those involved at the EEE waste disposal points

What are the key elements?

The WEEE Directive covers the following responsibilities on the part of producers:

Producers must draft a disposal or recovery scheme to dispose of EEE correctly.

Producers must be registered as producers in the country in which they distribute the goods.

They must also supply and publish information about the EEE categories.

Producers are obliged to finance the collection, treatment and disposal of WEEE.

Inclusion of WEEE logos on devices

In reference to the Directive, the WEEE logo must be printed directly on all devices that have sufficient space. «In exceptional cases where this is necessary because of the size of the product, the symbol of the WEEE Directive shall be printed on the packaging, on the instructions of use and on the warranty» (WEEE Directive 2002/96/EC)

When does the WEEE Directive take effect?

The Directive came into effect internationally on 13 August, 2005.

What is RoHS (2002/95/EC)?

The goals of the Directive are to:

- Place less of a burden on human health and to protect the environment by restricting the use of hazardous substances in new electrical and electronic devices
- To support the WEEE Directive (see above)

RoHS enforces the restriction of the following 6 hazardous substances in electronic and electrical devices:

- Lead (Pb) no more than 0.1% by weight in homogeneous materials
- Mercury (Hg) no more than 0.1% by weight in homogeneous materials
- Cadmium (Cd) no more than 0.01% by weight in homogeneous materials
- Chromium (Cr6+) no more than 0.1% by weight in homogeneous materials
- PBB, PBDE no more than 0.1% by weight in homogeneous materials

Swissbit is obliged to minimize the hazardous substances in the products.

According to part of the Directive, manufacturers are obliged to make a self-declaration for all devices with RoHS. Swissbit carried out intensive tests to comply with the self-declaration. We have also already taken steps to have the analyses of the individual components guaranteed by third-party companies.

Swissbit carried out the following steps during the year with the goal of offering our customers products that are fully compliant with the RoHS Directive.

- Preparing all far-reaching directives, logistical enhancements and alternatives regarding the full understanding and introduction of the RoHS Directive's standards
- Checking the components and raw materials:
 - Replacing non-RoHS-compliant components and raw materials in the supply chain
 - Cooperating closely with suppliers regarding the certification of all components and raw materials used by Swissbit
- Modifying the manufacturing processes and procedures
 - Successfully adapting and optimizing the new management-free integration process in the supply chain
 - Updating existing production procedures and introducing the new procedures to support the integration process and the sorting of materials
- Carrying out the quality process
 - Performing detailed function and safety tests to ensure the continuous high quality of the Swissbit product line

When does the RoHS Directive take effect?

As of 1 July, 2006, only new electrical and electronic devices with approved quantities of RoHS will be put on the market.

When will Swissbit be offering RoHS-approved products?

Swissbit's RoHS-approved products are available now. Please contact your Swissbit contact person to find out more about exchanging your existing products for RoHS-compliant devices.

For your attention

We understand that packaging and accessories are not EEE material and are therefore not subject to the WEEE or RoHS Directives.

The information in this document is subject to change without notice. SWISSBIT assumes no responsibility for any errors or omissions that may appear in this document, and disclaims responsibility for any consequences resulting from the use of the information set forth herein. SWISSBIT makes no commitments to update or to keep current information contained in this document. The products listed in this document are not suitable for use in applications such as, but not limited to, aircraft control systems, aerospace equipment, submarine cables, nuclear reactor control systems and life support systems. Moreover, SWISSBIT does not recommend or approve the use of any of its products in life support devices or systems or in any application where failure could result in injury or death. If a customer wishes to use SWISSBIT products in applications not intended by SWISSBIT, said customer must contact an authorized SWISSBIT representative to determine SWISSBIT willingness to support a given application. The information set forth in this document does not convey any license under the copyrights, patent rights, trademarks or other intellectual property rights claimed and owned by SWISSBIT. The information set forth in this document is considered to be "Proprietary" and "Confidential" property owned by SWISSBIT.

ALL PRODUCTS SOLD BY SWISSBIT ARE COVERED BY THE PROVISIONS APPEARING IN SWISSBIT'S TERMS AND CONDITIONS OF SALE ONLY, INCLUDING THE LIMITATIONS OF LIABILITY, WARRANTY AND INFRINGEMENT PROVISIONS. SWISSBIT MAKES NO WARRANTIES OF ANY KIND, EXPRESS, STATUTORY, IMPLIED OR OTHERWISE, REGARDING INFORMATION SET FORTH HEREIN OR REGARDING THE FREEDOM OF THE DESCRIBED PRODUCTS FROM INTELLECTUAL PROPERTY INFRINGEMENT, AND EXPRESSLY DISCLAIMS ANY SUCH WARRANTIES INCLUDING WITHOUT LIMITATION ANY EXPRESS, STATUTORY OR IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.
