

CDC5801A

LOW JITTER CLOCK MULTIPLIER AND DIVIDER WITH PROGRAMMABLE DELAY AND PHASE ALIGNMENT

SCAS813A – AUGUST 2005 – REVISED DECEMBER 2005

- Low Jitter Clock Multiplier by x4, x6, x8. Input Frequency Range (19 MHz to 125 MHz). Supports Output Frequency From 150 MHz to 500 MHz
- Fail-Safe Power Up Initialization
- Low Jitter Clock Divider by /2, /3, /4. Input Frequency Range (50 MHz to 125 MHz). Supports Ranges of Output Frequency From 12.5 MHz to 62.5 MHz
- 2.6 mUI Programmable Bidirectional Delay Steps
- Typical 8-ps Phase Jitter (12 kHz to 20 MHz) at 500 MHz
- Typical 2.1-ps RMS Period Jitter (Entire Frequency Band) at 500 MHz
- One Single-Ended Input and One Differential Output Pair
- Output Can Drive LVPECL, LVDS, and LVTTTL
- Three Power Operating Modes to Minimize Power
- Low Power Consumption (Typical 200 mW at 500 MHz)
- Packaged in a Shrink Small-Outline Package (DBQ)
- No External Components Required for PLL
- Spread Spectrum Clock Tracking Ability to Reduce EMI
- Applications: Video Graphics, Gaming Products, Datacom, Telecom
- Accepts LVCMOS, LVTTTL Inputs for REFCLK Terminal
- Accepts Other Single-Ended Signal Levels at REFCLK Terminal by Programming Proper V_{DDREF} Voltage Level (For Example, HSTL 1.5 if $V_{DDREF} = 1.6$ V)
- Supports Industrial Temperature Range of -40°C to 85°C

NC – No internal connection

description

The CDC5801A device provides clock multiplication and division from a single-ended reference clock (REFCLK) to a differential output pair (CLKOUT/CLKOUTB). The multiply and divide terminals (MULT/DIV0:1) provide selection for frequency multiplication and division ratios, generating CLKOUT/CLKOUTB frequencies ranging from 12.5 MHz to 500 MHz with a clock input reference (REFCLK) ranging from 19 MHz to 125 MHz. See Table 1 and Table 2 for detail frequency support.

The implemented phase aligner provides the possibility to phase align (zero delay) between CLKOUT/CLKOUTB and REFCLK or any other CLK in the system by feeding the clocks that need to be aligned to the DLYCTRL and the LEADLAG terminals.

The phase aligner also allows the user to delay or advance the CLKOUT/CLKOUTB with steps of 2.6 mUI (unit interval). For every rising edge on the DLYCTRL terminal, the output clocks are delayed by 2.6-mUI step size as long as there is low on the LEADLAG terminal. Similarly, for every rising edge on the DLYCTRL terminal, the output clocks are advanced by 2.6-mUI step size as long as there is high on the LEADLAG terminal. The CDC5801A has a fail-safe power up initialization state-machine which supports proper operation under all power up conditions. As the phase between REFCLK and CLKOUT/CLKOUTB is random after power up, the application may implement a self calibration routine at power up to produce a certain phase start position, before programming a fixed delay with the clock on the DLYCTRL terminal.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

SCAS813A – AUGUST 2005 – REVISED DECEMBER 2005

The CDC5801A has a fail-safe power up initialization state-machine which supports proper operation under all power up conditions.

functional block diagram

CDC5801A

LOW JITTER CLOCK MULTIPLIER AND DIVIDER WITH PROGRAMMABLE DELAY AND PHASE ALIGNMENT

SCAS813A – AUGUST 2005 – REVISED DECEMBER 2005

FUNCTION TABLE[†]

MODE	P0	P1	P2	CLKOUT/CLKOUTB
Multiplication with programmable delay and phase alignment active [‡]	0	0	0	REFCLK multiplied by ratio per Table 1 selected by MULT/DIV terminals. Outputs are delayed or advanced based on DLYCTRL and LEADLAG terminal configuration.
Division with programmable delay and phase alignment active [‡]	0	0	1	REFCLK divided by ratio per Table 2 selected by MULT/DIV terminals. Outputs are delayed or advanced based on DLYCTRL and LEADLAG terminal configuration.
Multiplication only mode (phase aligner bypassed) [§]	1	0	0	In this mode one can only multiply as per Table 1. Programmable delay capability and divider capability is deactivated. PLL is running.
Test mode	1	1	0	PLL and phase aligner both bypassed. REFCLK is directly channeled to output.
Hi-Z mode	0	1	X	Hi-Z

[†] X = don't care, Hi-Z = high impedance

[‡] Please see Table 4 and Table 5 for explanation for the programmability and phase alignment functions.

[§] In this mode the DLYCTRL and LEADLAG terminals must be strapped high or low. Lowest possible jitter is achieved in this mode, but a delay of 200 ps to 2 ns expected typically from REFCLK to CLKOUT depending on the output frequency.

Terminal Functions

TERMINAL NAME	NO.	I/O	DESCRIPTION
CLKOUT	20	O	Output clock
CLKOUTB	18	O	Output clock (complement)
DLYCTRL	7	I	Every rising edge on this terminal delays/advances the CLKOUT/CLKOUTB signal by 1/384th of the CLKOUT/CLKOUTB period. (e.g., for a 90 degree delay or advancement one needs to provide 96 rising edges). See Table 4.
GND	5		GND for V _{DDREF} and V _{DDPD}
GNDO	17, 21		GND for clock output terminals (CLKOUT, CLKOUTB)
GNDP	4		GND for PLL
GNDPA	8		GND for phase aligner
LEADLAG	6	I	Decides if the output clock is delayed or advanced with respect to REFCLK. See Table 4.
MULT0/DIV0	15	I	PLL multiplier and divider select
MULT1/DIV1	14	I	PLL multiplier and divider select
NC	19		Not used
PWRDNB	12	I	Active low power down state, CLKOUT/CLKOUTB goes low
P0	24	I	Mode control, see the Function Table
P1	23	I	Mode control, see the Function Table
P2	13	I	Mode control, see the Function Table
REFCLK	2	I	Reference input clock
STOPB	11	I	Active low output disabler, PLL and PA still running, CLKOUT and CLKOUTB goes to a dc value as per Table 3
V _{DDPA}	9	I	Supply voltage for phase aligner
V _{DDPD}	10	I	Reference voltage for the DLYCTRL, LEADLAG terminals and STOPB function
V _{DDREF}	1	I	Reference voltage for REFCLK
V _{DDO}	16, 22	I	Supply voltage for the output terminals (CLKOUT, CLKOUTB)
V _{DDP}	3	I	Supply voltage for PLL

CDC5801A

LOW JITTER CLOCK MULTIPLIER AND DIVIDER WITH PROGRAMMABLE DELAY AND PHASE ALIGNMENT

SCAS813A – AUGUST 2005 – REVISED DECEMBER 2005

PLL divider/multiplier selection

Table 1 and Table 2 list the supported REFCLK and BUSCLK (CLKOUT/CLKOUTB) frequencies.

Table 1. Multiplication Ratios (P0:2 = 000 or 100)

MULT0	MULT1	REFCLK (MHZ)	MULTIPLICATION RATIO	BUSCLK (MHZ)
0	0	38–125	4	152–500
0	1	25–83.3	6	150–500
1	1	19–62.5	8	152–500

Table 2. Divider Ratio (P0:2 = 001)

MULT0	MULT1	REFCLK (MHZ)	DIVISION RATIO	BUSCLK ⁽¹⁾ (MHZ)
0	0	100–125	2	50–62.5
1	0	75–93	3	25–31
1	1	50–62	4	12.5–15.5

[†] BUSCLK will be undefined until a valid reference clock is available at REFCLK. After applying REFCLK, the PLL requires stabilization time to achieve phase lock.

Table 3. Clock Output Driver States

STATE	PWRDNB	STOPB	CLKOUT	CLKOUTB
Powerdown	0	X	GND	GND
CLK stop	1	0	V _O , STOP	V _O , STOP
Normal	1	1	As per Function Table	As per Function Table

Table 4. Programmable Delay and Phase Alignment

DLYCTRL	LEADLAG	CLKOUT AND CLKOUTB
Each rising edge [†]	1	Will be advanced by one step size (see Table 5)
Each rising edge [†]	0	Will be delayed by one step size (see Table 5)

[†] For every 32nd edge, there are one or two edges the phase aligner does not update. Therefore, CLKOUT phase is not updated on every 32nd edge.

Table 5. Clock Output Driver States

FUNCTIONALITY	STEP SIZE
Multiply by 4, 6, 8	CLKOUT period/384 (for example, 6.5 ps at 400 MHz)
Divide by 2	CLKOUT period/3072 (for example, 6.5 ps at 50 MHz)
Divide by 3	CLKOUT period/6144 (for example, 6.5 ps at 25 MHz)
Divide by 4	CLKOUT period/12288 (for example, 6.5 ps at 12.5 MHz)

NOTE: The frequency of the DLYCTRL terminal must always be equal or less than the frequency of the LEADLAG terminal.

CDC5801A

LOW JITTER CLOCK MULTIPLIER AND DIVIDER WITH PROGRAMMABLE DELAY AND PHASE ALIGNMENT

SCAS813A – AUGUST 2005 – REVISED DECEMBER 2005

absolute maximum ratings over operating free-air temperature (unless otherwise noted)[†]

Supply voltage range, V_{DD} (see Note 1)	–0.5 V to 4 V
Output voltage range, V_O , at any output terminal	–0.5 V to $V_{DD} + 0.5$ V
Input voltage range, V_I , at any input terminal	–0.5 V to $V_{DD} + 0.5$ V
Continuous total power dissipation	see Dissipation Rating Table
Operating free-air temperature range, T_A	–40°C to 85°C
Storage temperature range, T_{stg}	–65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C

[†] Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values are with respect to the GND terminals.

DISSIPATION RATING TABLE

PACKAGE	$T_A \leq 25^\circ\text{C}$ POWER RATING	DERATING FACTOR ABOVE $T_A = 25^\circ\text{C}$ [‡]	$T_A = 85^\circ\text{C}$ POWER RATING
DBQ	1400 mW	11 mW/°C	740 mW

[‡] This is the inverse of the junction-to-ambient thermal resistance when board-mounted and with no air flow.

recommended operating conditions

t(MULT)	MULT0 and MULT1 change to CLKOUT/CLKOUTB output resettled (excluding t(DISTLOCK))	Normal	Normal	See Figure 7			1	ms
t(CLKON)	STOPB↑ to CLKOUT/CLKOUTB glitch-free clock edges	CLK Stop	Normal	See Figure 8			10	ns
t(CLKSETL)	STOPB↑ to CLKOUT/CLKOUTB output settled to within 50 ps of the phase before STOPB was disabled	CLK Stop	Normal	See Figure 8			20	cycles
t(CLKOFF)	STOPB↓ to CLKOUT/CLKOUTB output disabled	Normal	CLK Stop	See Figure 8			5	ns
t(powerdown)	Delay time, PWRDNB↓ to the device in the power-down mode	Normal	Power-down	See Figure 6			1	ms
t(STOP)	Maximum time in CLKSTOP (STOPB = 0) before reentering normal mode (STOPB = 1)	STOPB	Normal	See Figure 8			100	μs
t(ON)	Minimum time in normal mode (STOPB = 1) before reentering CLKSTOP (STOPB = 0)	Normal	CLK stop	See Figure 8	100			ms

† All typical values are at VDD = 3.3 V, TA = 25°C.

TAPE AND REEL INFORMATION
REEL DIMENSIONS

TAPE DIMENSIONS

A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

TAPE AND REEL INFORMATION

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
CDC5801ADBQR	SSOP	DBQ	24	2500	330.0	16.4	6.5	9.0	2.1	8.0	16.0	Q1

TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15) per side.
 - D. Falls within JEDEC MO-137 variation AE.

DBQ (R-PDSO-G24)

PLASTIC SMALL OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
 - D. Publication IPC-7351 is recommended for alternate designs.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46C and to discontinue any product or service per JESD48B. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components which meet ISO/TS16949 requirements, mainly for automotive use. Components which have not been so designated are neither designed nor intended for automotive use; and TI will not be responsible for any failure of such components to meet such requirements.
