

DS90CP22 800 Mbps 2x2 LVDS Crosspoint Switch

Check for Samples: [DS90CP22](#)

FEATURES

- DC - 800 Mbps Low Jitter, Low Skew Operation
- 65 ps (typ) of Pk-Pk Jitter with PRBS = $2^{23}-1$ Data Pattern at 800 Mbps
- Single +3.3 V Supply
- Less than 330 mW (typ) Total Power Dissipation
- Non-Blocking "Switch Architecture"
- Balanced Output Impedance
- Output Channel-to-Channel Skew is 35 ps (typ)
- Configurable as 2:1 mux, 1:2 demux, Repeater or 1:2 Signal Splitter
- LVDS Receiver Inputs Accept LVPECL Signals
- Fast Switch Time of 1.2ns (typ)
- Fast Propagation Delay of 1.3ns (typ)
- Receiver Input Threshold $< \pm 100$ mV
- Available in 16 Lead TSSOP and SOIC Packages
- Conforms to ANSI/TIA/EIA-644-1995 LVDS Standard
- Operating Temperature: -40°C to $+85^{\circ}\text{C}$

DESCRIPTION

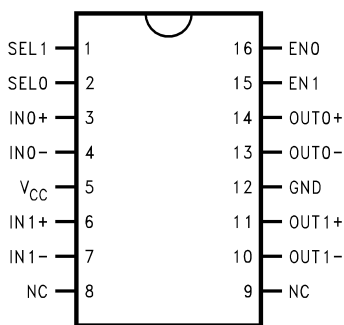

DS90CP22 is a 2x2 crosspoint switch utilizing LVDS (Low Voltage Differential Signaling) technology for low power, high speed operation. Data paths are fully differential from input to output for low noise generation and low pulse width distortion. The non-blocking design allows connection of any input to any output or outputs. LVDS I/O enable high speed data transmission for point-to-point interconnects. This device can be used as a high speed differential crosspoint, 2:1 mux, 1:2 demux, repeater or 1:2 signal splitter. The mux and demux functions are useful for switching between primary and backup circuits in fault tolerant systems. The 1:2 signal splitter and 2:1 mux functions are useful for distribution of serial bus across several rack-mounted backplanes.

The DS90CP22 accepts LVDS signal levels, LVPECL levels directly or PECL with attenuation networks.

The individual LVDS outputs can be put into TRI-STATE by use of the enable pins.

For more details, please refer to the [Application Information](#) section of this datasheet.

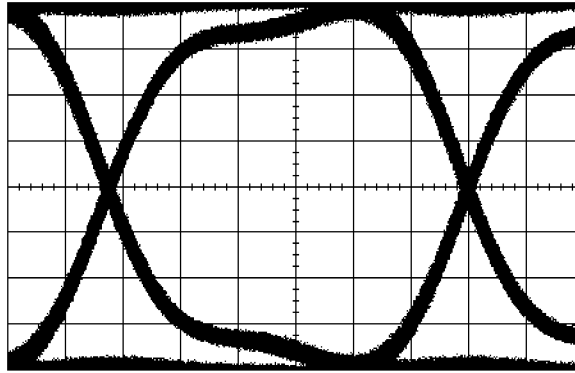

Figure 2. Diff. Output Eye-Pattern in 1:2 split mode @ 800 Mbps
Conditions: 3.3 V, PRBS = $2^{23}-1$ data pattern,
 $V_{ID} = 300\text{mV}$, $V_{CM} = +1.2\text{ V}$, 200 ps/div, 100 mV/div

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings⁽¹⁾⁽²⁾

Supply Voltage (V_{CC})		-0.3V to +4V
CMOS/TTL Input Voltage (EN0, EN1, SEL0, SEL1)		-0.3V to ($V_{CC} + 0.3\text{V}$)
LVDS Receiver Input Voltage (IN+, IN-)		-0.3V to +4V
LVDS Driver Output Voltage (OUT+, OUT-)		-0.3V to +4V
LVDS Output Short Circuit Current		Continuous
Junction Temperature		+150°C
Storage Temperature Range		-65°C to +150°C
Lead Temperature (Soldering, 4 sec.)		+260°C
Maximum Package Power Dissipation at 25°C	16L SOIC	1.435 W
	16L SOIC Package Derating	11.48 mW/°C above +25°C
	16L TSSOP	0.866 W
	16L TSSOP Package Derating	9.6 mW/°C above +25°C
ESD Rating	(HBM, 1.5kΩ, 100pF)	> 5 kV
	(EIAJ, 0Ω, 200pF)	> 250 V

- (1) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/Distributors for availability and specifications.
- (2) "Absolute Maximum Ratings" are those beyond which the safety of the device cannot be verified. They are not meant to imply that the device should be operated at these limits. "Electrical Characteristics" provides conditions for actual device operation.

Recommended Operating Conditions

	Min	Typ	Max	Units
Supply Voltage (V_{CC})	3.0	3.3	3.6	V
Receiver Input Voltage	0		V_{CC}	V
Operating Free Air Temperature	-40	+25	+85	°C

Electrical Characteristics⁽¹⁾

Over recommended operating supply and temperature ranges unless otherwise specified

Symbol	Parameter	Conditions	Min	Typ	Max	Units
CMOS/TTL DC SPECIFICATIONS (EN0,EN1,SEL0,SEL1)						
V _{IH}	High Level Input Voltage		2.0		V _{CC}	V
V _{IL}	Low Level Input Voltage		GND		0.8	V
I _{IH}	High Level Input Current	V _{IN} = 3.6V or 2.0V; V _{CC} = 3.6V		+7	+20	μA
I _{IL}	Low Level Input Current	V _{IN} = 0V or 0.8V; V _{CC} = 3.6V		±1	±10	μA
V _{CL}	Input Clamp Voltage	I _{CL} = -18 mA		-0.8	-1.5	V
LVDS OUTPUT DC SPECIFICATIONS (OUT0,OUT1)						
V _{OD}	Differential Output Voltage	R _L = 75Ω	270	365	475	mV
		R _L = 75Ω, V _{CC} = 3.3V, T _A = 25°C	285	365	440	mV
ΔV _{OD}	Change in V _{OD} between Complimentary Output States				35	mV
V _{OS}	Offset Voltage ⁽²⁾		1.0	1.2	1.45	V
ΔV _{OS}	Change in V _{OS} between Complimentary Output States				35	mV
I _{OZ}	Output TRI-STATE Current	TRI-STATE Output, V _{OUT} = V _{CC} or GND		±1	±10	μA
I _{OFF}	Power-Off Leakage Current	V _{CC} = 0V; V _{OUT} = 3.6V or GND		±1	±10	μA
I _{OS}	Output Short Circuit Current	V _{OUT+} OR V _{OUT-} = 0V		-15	-25	mA
I _{OSB}	Both Outputs Short Circuit Current	V _{OUT+} AND V _{OUT-} = 0V		-30	-50	mA
LVDS RECEIVER DC SPECIFICATIONS (IN0,IN1)						
V _{TH}	Differential Input High Threshold	V _{CM} = +0.05V or +1.2V or +3.25V,		0	+100	mV
V _{TL}	Differential Input Low Threshold	V _{CC} = 3.3V	-100	0		mV
V _{CMR}	Common Mode Voltage Range	V _{ID} = 100mV, V _{CC} = 3.3V	0.05		3.25	V
I _{IN}	Input Current	V _{IN} = +3.0V, V _{CC} = 3.6V or 0V		±1	±10	μA
		V _{IN} = 0V, V _{CC} = 3.6V or 0V		±1	±10	μA
SUPPLY CURRENT						
I _{CCD}	Total Supply Current	R _L = 75Ω, C _L = 5 pF, EN0 = EN1 = High		98	125	mA
I _{CCZ}	TRI-STATE Supply Current	EN0 = EN1 = Low		43	55	mA

(1) All typical are given for V_{CC} = +3.3V and T_A = +25°C, unless otherwise stated.

(2) V_{OS} is defined and measured on the ATE as (V_{OH} + V_{OL}) / 2.

AC Electrical Characteristics

Over recommended operating supply and temperature ranges unless otherwise specified⁽¹⁾

Symbol	Parameter	Conditions	Min	Typ	Max	Units
T _{SET}	Input to SEL Setup Time ⁽²⁾ , (Figure 3 and Figure 4)		0.7	0.5		ns
T _{HOLD}	Input to SEL Setup Time ⁽²⁾ , (Figure 3 and Figure 4)		1.0	0.5		ns
T _{SWITCH}	SEL to Switched Output, (Figure 3 and Figure 4)		0.9	1.2	1.7	ns
T _{PHZ}	Disable Time (Active to TRI-STATE) High to Z, Figure 5			2.1	4.0	ns
T _{PLZ}	Disable Time (Active to TRI-STATE) Low to Z, Figure 5			3.0	4.5	ns
T _{PZH}	Enable Time (TRI-STATE to Active) Z to High, Figure 5			25.5	55.0	ns
T _{PZL}	Enable Time (TRI-STATE to Active) Z to Low, Figure 5			25.5	55.0	ns
T _{LHT}	Output Low-to-High Transition Time, 20% to 80%, Figure 7		290	400	580	ps
T _{HLT}	Output High-to-Low Transition Time, 80% to 20%, Figure 7		290	400	580	ps

(1) The parameters are specified by design. The limits are based on statistical analysis of the device performance over PVT (process, voltage and temperature) range.

(2) T_{SET} and T_{HOLD} time specify that data must be in a stable state before and after the SEL transition.

AC Electrical Characteristics (continued)

Over recommended operating supply and temperature ranges unless otherwise specified⁽¹⁾

Symbol	Parameter	Conditions	Min	Typ	Max	Units
T_{JIT}	LVDS Data Path Peak to Peak Jitter ⁽³⁾	$V_{ID} = 300\text{mV}$; 50% Duty Cycle; $V_{CM} = 1.2\text{V}$ at 800Mbps		40	90	ps
		$V_{ID} = 300\text{mV}$; PRBS=2 ²³ -1 data pattern; $V_{CM} = 1.2\text{V}$ at 800Mbps		65	120	ps
T_{PLHD}	Propagation Low to High Delay, Figure 8		0.9	1.3	1.6	ns
	Propagation Low to High Delay, Figure 8	$V_{CC} = 3.3\text{V}$, $T_A = 25^\circ\text{C}$	1.0	1.3	1.5	ns
T_{PHLD}	Propagation High to Low Delay, Figure 8		0.9	1.3	1.6	ns
	Propagation High to Low Delay, Figure 8	$V_{CC} = 3.3\text{V}$, $T_A = 25^\circ\text{C}$	1.0	1.3	1.5	ns
T_{SKEW}	Pulse Skew $ T_{PLHD} - T_{PHLD} $			0	225	ps
T_{CCS}	Output Channel-to-Channel Skew, Figure 9			35	80	ps

(3) The parameters are specified by design. The limits are based on statistical analysis of the device performance over PVT range with the following equipment test setup: HP70004A (display mainframe) with HP70841B (pattern generator), 5 feet of RG-142 cable with DUT test board and HP83480A (digital scope mainframe) with HP83483A (20GHz scope module).

PIN DESCRIPTIONS

Pin Name	# of Pin	Input/Output	Description
IN+	2	I	Non-inverting LVDS input
IN -	2	I	Inverting LVDS input
OUT+	2	O	Non-inverting LVDS Output
OUT -	2	O	Inverting LVDS Output
EN	2	I	A logic low on the Enable puts the LVDS output into TRI-STATE and reduces the supply current
SEL	2	I	2:1 mux input select
GND	1	P	Ground
V _{CC}	1	P	Power Supply
NC	2		No Connect

APPLICATION INFORMATION

MODES OF OPERATION

The DS90CP22 provides three modes of operation. In the 1:2 splitter mode, the two outputs are copies of the same single input. This is useful for distribution / fan-out applications. In the repeater mode, the device operates as a 2 channel LVDS buffer. Repeating the signal restores the LVDS amplitude, allowing it to drive another media segment. This allows for isolation of segments or long distance applications. The switch mode provides a crosspoint function. This can be used in a system when primary and redundant paths are supported in fault tolerant applications.

INPUT FAIL-SAFE

The receiver inputs of the DS90CP22 do not have internal fail-safe biasing. For point-to-point and multidrop applications with a single source, fail-safe biasing may not be required. When the driver is off, the link is inactive. If fail-safe biasing is required, this can be accomplished with external high value resistors. The IN+ should be pull to Vcc with 10k Ω and the IN– should be pull to Gnd with 10k Ω . This provides a slight positive differential bias, and sets a known HIGH state on the link with a minimum amount of distortion.

UNUSED LVDS INPUTS

Unused LVDS Receiver inputs should be tied off to prevent the high-speed sensitive input stage from picking up noise signals. The open input to IN+ should be pull to Vcc with 10k Ω and the open input to IN– should be pull to Gnd with 10k Ω .

UNUSED CONTROL INPUTS

The SEL and EN control input pins have internal pull down devices. Unused pins may be tied off or left as no-connect (if a LOW state is desired).

EXPANDING THE NUMBER OF OUTPUT PORTS

To expand the number of output ports, more than one DS90CP22 can be used. Total propagation delay through the devices should be considered to determine the maximum expansion. For example, if 2 X 4 is desired, than three of the DS90CP22 are required. A minimum of two device propagation delays ($2 \times 1.3\text{ns} = 2.6\text{ns}$ (typ)) can be achieved. For a 2 X 8, a total of 7 devices must be used with propagation delay of $3 \times 1.3\text{ns} = 3.9\text{ns}$ (typ). The power consumption will increase proportional to the number of devices used.

PCB LAYOUT AND POWER SYSTEM BYPASS

Circuit board layout and stack-up for the DS90CP22 should be designed to provide noise-free power to the device. Good layout practice also will separate high frequency or high level inputs and outputs to minimize unwanted stray noise pickup, feedback and interference. Power system performance may be greatly improved by using thin dielectrics (4 to 10 mils) for power/ground sandwiches. This increases the intrinsic capacitance of the PCB power system which improves power supply filtering, especially at high frequencies, and makes the value and placement of external bypass capacitors less critical. External bypass capacitors should include both RF ceramic and tantalum electrolytic types. RF capacitors may use values in the range 0.01 μF to 0.1 μF . It is recommended practice to use two vias at each power pin of the DS90CP22 as well as all RF bypass capacitor terminals. Dual vias reduce the interconnect inductance by up to half, thereby reducing interconnect inductance and extending the effective frequency range of the bypass components.

The outer layers of the PCB may be flooded with additional ground plane. These planes will improve shielding and isolation as well as increase the intrinsic capacitance of the power supply plane system. Naturally, to be effective, these planes must be tied to the ground supply plane at frequent intervals with vias. Frequent via placement also improves signal integrity on signal transmission lines by providing short paths for image currents which reduces signal distortion.

There are more common practices which should be followed when designing PCBs for LVDS signaling.

COMPATIBILITY WITH LVDS STANDARD

The DS90CP22 is compatible with LVDS and Bus LVDS Interface devices. It is enhanced over standard LVDS drivers in that it is able to driver lower impedance loads with standard LVDS levels. Standard LVDS drivers provide 330mV differential output with a 100Ω load. The DS90CP22 provides 365mV with a 75Ω load or 400mV with 100Ω loads. This extra drive capability is useful in certain multidrop applications.

In backplane multidrop configurations, with closely spaced loads, the effective differential impedance of the line is reduced. If the mainline has been designed for 100Ω differential impedance, the loading effects may reduce this to the 70Ω range depending upon spacing and capacitance load. Terminating the line with a 75Ω load is a better match than with 100Ω and reflections are reduced.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

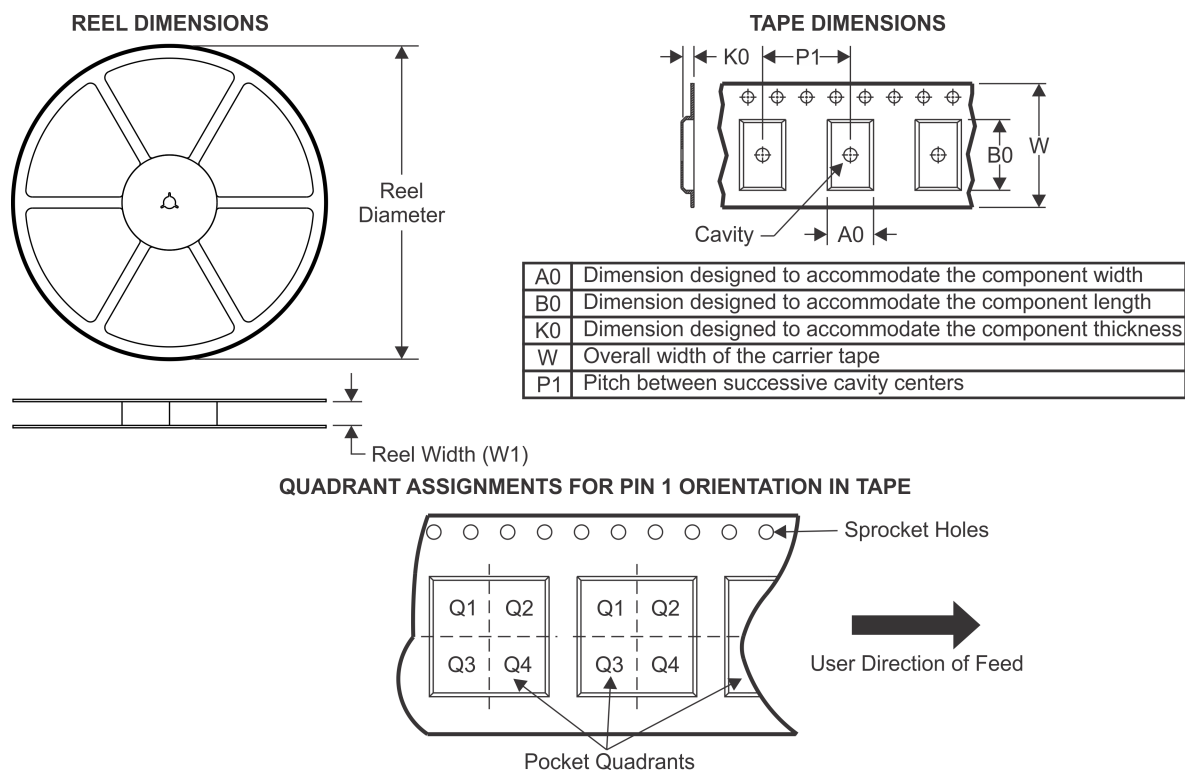

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

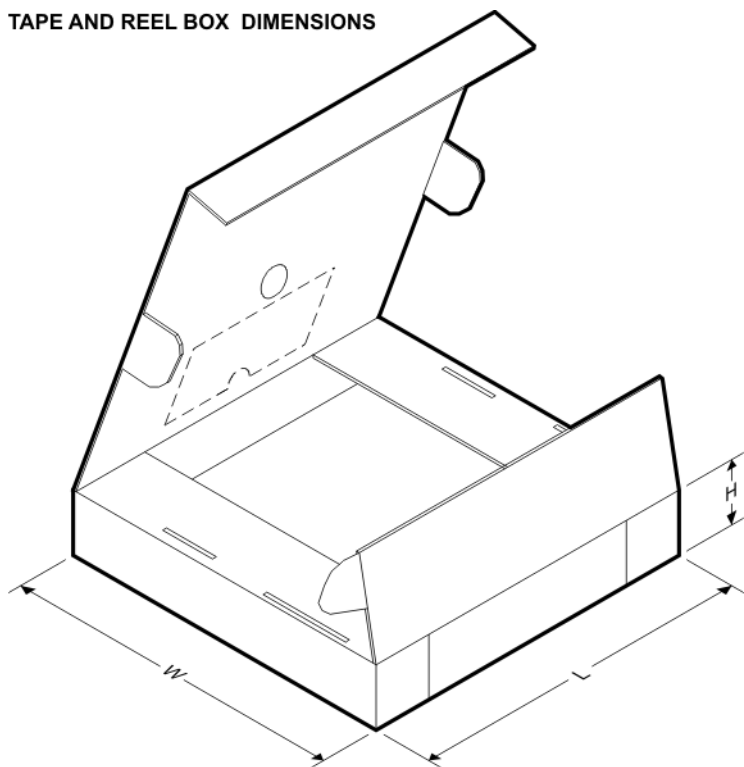

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
