# 83893 plastic solenoid locking switch 838932 2-pole Part number 83893203

- Monitoring of moving guards for machines with a stopping time which is greater than the time taken to access the danger zone
- Locked by removing the voltage, unlocked by applying voltage to the electromagnet
- Plastic heads and bodies
- Heads have 4 possible positions at 90°
- Positive opening contacts

29/10/2013 www.crouzet.com

Flexible key 79 214 583

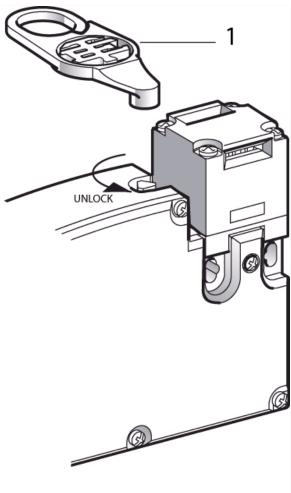

Type 83 893 2 safety switches are fitted with an electromagnet for locking/unlocking the guard.

With the guard locked, the force required to remove the key is 50 daN.

In addition to the 2-pole contact element actuated by the key, type 83 893 2 limit switches also have a positive break type "NC" contact element, actuated by the electromagnet. The "NC" contact is integrated in the machine safety circuit.

Principles

29/10/2013 www.crouzet.com

Type 83 893 2 safety switches are supplied with a tool (1) which can be used to unlock the moving guard, bypassing the electromagnet.

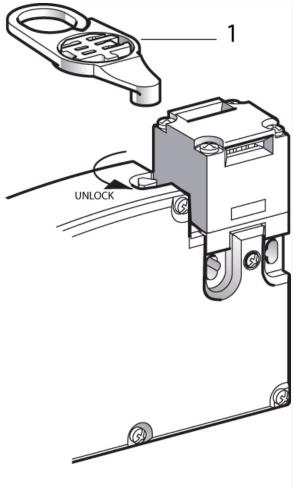

- Unlocking using a tool is recommended in the following cases:

  machine maintenance (if the tool is in the "UNLOCK" position and then removed, this will prevent the machine from restarting accidentally, therefore ensuring the safety of maintenance personnel).

  mains failure

  problem with unlocking (locking cannot be released: fail-safe condition). Unlocking by applying power to the electromagnet always takes priority over unlocking using a tool. The "NC" contact is integrated in the machine safety circuit.

Principles

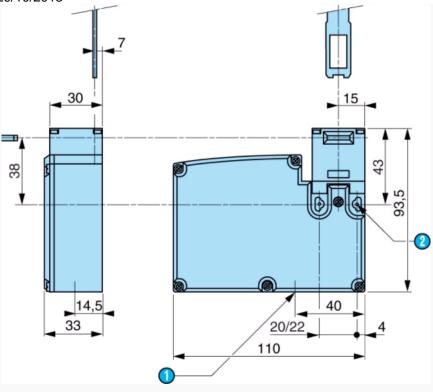

Power supply for the electromagnet on 83 89 3 2

The electromagnet for type 83 893 2 safety switches is supplied by an electronic circuit which increases its service life. As the 24 V version is protected by a **bridge rectifier**, an A.C. or D.C. supply can therefore be used. The 120 V and 230 V versions are A.C. only. It is also protected against voltage surges.
