

LM4921 Boomer® Audio Power Amplifier Series Low Voltage I²S 16-Bit Stereo DAC with Stereo Headphone Power Amplifiers and Volume Control

Check for Samples: [LM4921](#)

FEATURES

- 16-Bit Resolution Stereo DAC
- I²S Digital Audio Data Serial Interface
- SPI Serial Interface (Control Register)
- Volume Control (32 steps; 1.5 dB Increments)
- Up to 50mW/Channel Stereo Headphone Amplifier
- Zero Crossing Detection for Silent Attenuation Steps
- 2.6V_{DC} to 5.0V_{DC} Digital Supply Voltage Range
- 2.6V_{DC} to 5.5V_{DC} Analog Supply Voltage Range (See ⁽¹⁾)
- Unity-Gain Stable Headphone Amplifiers
- Available in the 20-bump DSBGA Package

KEY SPECIFICATIONS

- PSRR at 217Hz, A/DV_{DD} = 3V, (See [Figure 1](#)): 52dB (typ)
 - P_{OUT} at AV_{DD} = 3.0V, 32Ω
 - < 0.05% THD: 13mW (typ)
 - < 0.05% THD: 26mW (typ)
 - Supply Voltage Range
 - DV_{DD}: 2.6V to 5.0V
 - AV_{DD}: (See ⁽¹⁾) 2.6V to 5.5V
 - Shutdown Current: 1μA (typ)
- (1) Best operation is achieved by maintaining 3.0V ≤ AV_{DD} ≤ 5.0V and 3.0V ≤ DV_{DD} ≤ 5.0V.

APPLICATIONS

- Mobile Phones
- PDAs
- Portable Electronic Devices

DESCRIPTION

The LM4921 combines a 16-bit resolution stereo I²S input digital-to-analog converter (DAC) with a stereo headphone audio power amplifier. It is primarily designed for demanding applications in mobile phones and other portable communication device applications. The LM4921 features an I²S serial interface for the digital audio information and a 16-bit SPI serial interface for internal register control and communication. With AV_{DD} and DV_{DD} = 3.0V_{DC} and driving a 32Ω single-ended load to a 26mW_{RMS} output level the distortion (THD+N) of the LM4921 will be less than 0.5%. The LM4921 also features a programmable 32-step digital volume control accessed through an SPI interface.

Boomer audio power amplifiers were designed specifically to provide high quality output power with a minimal amount of external components. It is, therefore, ideally suited for mobile phone and other low voltage applications where minimal power consumption is a primary requirement.

The LM4921 features a low-power consumption shutdown mode, and also has an internal thermal shutdown protection mechanism.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

LM4921 I/O PIN DESCRIPTIONS

PIN # (ITL)	PIN NAME	PIN TYPE Input-I, Output-O, Power-P, No Connect- NC	PIN DESCRIPTION
B1	I2S_CLK	I/O	I2S Clock
C2	I2S_DATA	I	I2S data
B2	I2S_WS	I/O	I2S L/R word select
E3	SPI_CLK	I	SPI clock
E4	SPI_DATA	I	SPI data
D3	SPI_ENABLE	I	SPI Enable
E2	MCLK/XTAL_IN	I	Master Clock / Xtal input
D2	XTAL_OUT	O	Xtal output
C4	BYPASS	I/O	Analog VDD/2 bypass capacitor connection point
B4	AV _{DD}	P	Analog supply
A3	AGND	P	Analog Ground
C1	DV _{DD}	P	Digital Supply
A1	GNDD	P	Digital ground
D1	VDDX	P	XTAL Oscillator circuit supply
E1	GNDX	P	XTAL Oscillator circuit ground
B3	HP_L	O	HP left output
A4	HP_R	O	HP right output
A2	No Connect	O	Must let float
C3	No Connect	NC	NC
D4	No Connect	NC	NC

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings⁽¹⁾⁽²⁾

Supply Voltage		6.0V
Storage Temperature		–65°C to +150°C
Input Voltage		–0.3V to $V_{DD} + 0.3V$
Power Dissipation ⁽³⁾		Internally Limited
ESD Susceptibility	Human body model ⁽⁴⁾	2000V
	Machine model ⁽⁵⁾	200V
Junction Temperature		150°C
Thermal Resistance	θ_{JA}	60°C/W

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not ensure specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which ensure specific performance limits. This assumes that the device is within the Operating Ratings. Specifications are not ensured for parameters where no limit is given, however, the typical value is a good indication of device performance.
- (2) All voltages are measured with respect to the GND pin, unless otherwise specified.
- (3) The maximum power dissipation must be derated at elevated temperatures and is dictated by T_{JMAX} , θ_{JA} , and the ambient temperature T_A . The maximum allowable power dissipation is $P_{DMAX} = (T_{JMAX} - T_A) / \theta_{JA}$ or the number given in Absolute Maximum Ratings, whichever is lower.
- (4) Human body model, 100pF discharged through a 1.5k Ω resistor.
- (5) Machine Model, 220pF – 240pF discharged through all pins.

Operating Ratings

Temperature Range		
$T_{MIN} \leq T_A \leq T_{MAX}$		–40°C $\leq T_A \leq$ 85°C
Supply Voltage	DV_{DD}	2.6V $\leq DV_{DD} \leq$ 5.0V
	AV_{DD}	2.6V $\leq AV_{DD} \leq$ 5.5V

Electrical Characteristics $DV_{DD} = 3.0V$, $AV_{DD} = 5.0V$, $R_L = 32\Omega^{(1)(2)}$

The following specifications apply for the circuit shown in [Figure 1](#) unless otherwise specified. Limits apply for $T_A = 25^\circ C$.

Symbol	Parameter	Conditions	LM4921		Units (Limits)
			Typical ⁽³⁾	Limit ⁽⁴⁾⁽⁵⁾

APPLICATION INFORMATION

SPI OPERATIONAL DESCRIPTION

The serial data bits are organized into a field which contains 16 bits of data defined by [Table 1](#). Bits 1 & 2 determine the output mode of the LM4921 as shown in [Table 2](#). Bits 7 through 11 determine the volume level setting as illustrated by [Table 3](#). Bit 12 sets the Bypass capacitor charging time.

Table 1. Bit Allocation

BIT #	Default Val	Function	Description
0 (LSB)	0	RESET_B	RESET_B = 0, Resets the DAC Must be high for the part to run.
1	0	MODE CONTROL	See Table 2
2	0		
3	0	MASTER/SLAVE	0 = SLAVE, 1 = MASTER
4	0	RESOLUTION	0 = 16 bit, 1 = 32 bit
5	0	RESERVED	Should always be set to '1'
6	0	ZERO CROSSING SET	0 = ZXD ENABLE, 1 = ZXD DISABLE
7	0	VOLUME CONTROL	See Table 3
8	0		
9	0		
10	0		
11	0		
12	0	BYP CHARGE RATE	0 = 1X, 1 = 2X
13	0	RESERVED	
14	0	RESERVED	
15 (MSB)	0	RESERVED	Should always be set to '0'

MODE CONTROL

Sets the modes as outlined in [Table 2](#).

Table 2. Output Mode Selection (Bits 1 & 2 above)

Output Mode #	BIT 2	BIT 1	MODE
0	0	0	SD
1	0	1	STANDBY
2	1	0	MUTE
3	1	1	ACTIVE

Shutdown turns off the part completely for maximum power savings. The Standby mode turns off the clock but still consumes more power than the shutdown mode. However, coming out of standby mode allows the part to turn back on faster than from shutdown. In Mute mode the clocks remain on which uses more power but allows faster recovery and the ability to supply clock signals to other devices which is important when the part is used in master mode. Active mode turns the part on for normal operation.

MASTER/SLAVE SELECT

Allows the part to act as a master and supply the clock for the rest of the system or be a slave to the system clock.

RESOLUTION SET

Sets the resolution to be either 16 or 32 bits of stereo audio information. For most applications this will be set at 16 bits.

ZERO CROSSING DETECT SET

This pin turns on the zero crossing detection circuit. With this circuit enabled the part will not allow a volume step change, or shutdown mode, or standby mode to occur until the audio input signal passes through zero. This pin should be set to on for most applications.

VOLUME CONTROL

The internal Stereo Volume Control is set by changing bits 7 through 11 in the SPI interface, as shown in [Table 3](#) below. The zero dB setting is for 3V VDD operation and the +3dB is for 5V VDD.

Table 3. Volume Control Settings

Gain (dB) HP_L & HP_R	Bit 11	Bit 10	Bit 9	Bit 8	Bit 7
-43.5	0	0	0	0	0
-42.0	0	0	0	0	1
-40.5	0	0	0	1	0
-39.0	0	0	0	1	1
-37.5	0	0	1	0	0
-36.0	0	0	1	0	1

-3.0	1	1	0	1	1
-1.5	1	1	1	0	0
0.0	1	1	1	0	1
1.5	1	1	1	1	0
3.0	1	1	1	1	1

BYPASS CHARGE RATE BIT 12

This control pin allows the user to change the Bypass Capacitor's charge rate by a factor of two. Setting this bit at zero will set the circuit to its normal 1x rate. Setting the bit to High will double the charge rate and allow the part to turn on faster with a slight degradation in turn on click/pop noise.

BITS 5, 13, 14, and 15

Bits 13, 14, and 15 are all reserve bits and must be set to low/zero/ground.

Bit 5 must be set High.

SPI CONTROL INTERFACE BUS (J1)

SPI DATA: This is the serial data pin.

SPI CLK: This is the clock input pin.

SPI ENABLE: This is the SPI enable pin.

SPI TIMING DIAGRAM

SPI OPERATIONAL REQUIREMENTS

1. The maximum clock rate is 5MHz for the CLK pin.
2. CLK must remain logic-high for at least 100ns (t_{CH}) after the rising edge of CLK, and CLK must remain logic-low for at least 100ns (t_{CL}) after the falling edge of CLK.
3. Data bits are written to the DATA pin with the least significant bit (LSB) first.
4. The serial data bits are sampled at the rising edge of CLK. Any transition on DATA must occur at least 20ns (t_{DS}) before the rising edge of CLK. Also, any transition on DATA must occur at least 20ns (t_{DH}) after the rising edge of CLK and stabilize before the next rising edge of CLK.
5. ENABLE should be logic-high only during serial data transmission.
6. ENABLE must be logic-high at least 20ns (t_{ES}) before the first rising edge of CLK, and ENABLE has to remain logic-high at least 20ns (t_{EH}) after the sixteenth rising edge of CLK.
7. If ENABLE remains logic-low for more than 10ns before all 16 bits are transmitted then the data latch will be aborted.
8. If ENABLE is logic-high for more than 16 CLK pulses then only the first 16 data bits will be latched and activated at rising edge of sixteenth CLK.
9. ENABLE must remain logic-low for at least 30ns (t_{EL}).
10. Coincidental rising or falling edges of CLK and ENABLE are not allowed. If CLK is to be held logic-high after the data transmission, the falling edge of CLK must occur at least 20ns (t_{CS}) before ENABLE transitions to logic-high for the next set of data.

I2S INTERFACE BUS (J2 - See [Figure 21](#))

The I2S standard provides a uni-directional serial interface designed specifically for digital audio. For the LM4921, the interface provides access to a 48kHz, 16 bit full-range stereo audio DAC. This interface uses a three wire system of clock (I2S_CLK), data (I2S_DATA), and word select (I2S_WS, sometimes called Right/Left Select).

A bit clock (I2S_CLK) at 32 or 64 times the sample frequency is established by the I2S system master and the word select (I2S_WS) line is driven at a frequency equal to the sampling rate of the audio data, in this case 48kHz. The word line is registered to change on the positive edge of the bit clock. The serial data (I2S_DATA) is sent MSB first, again registers on the positive edge of the bit clock, delayed by 1 bit clock cycle relative to the changing of the word line (typical I²S format).

MCLK/XTAL_IN (S1 MCLK SEL - See [Figure 21](#))

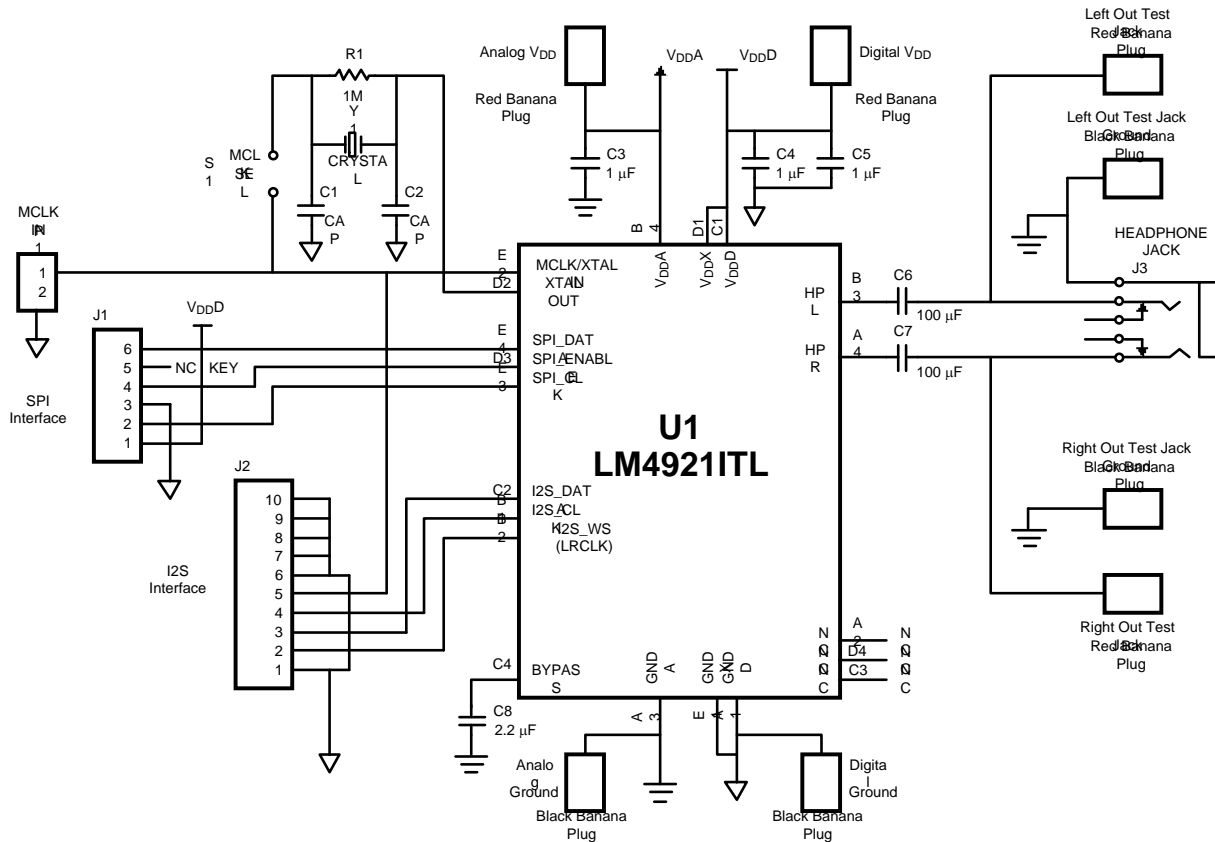

This is the input for an external Master Clock. The jumper at S1 must be removed (disconnecting the onboard crystal from the circuit) when using an external Master Clock.

STEREO HEADPHONE OUTPUT JACK (J3 - See [Figure 21](#))

This is the stereo headphone output. Each channel is single-ended, with 100uF DC output blocking capacitors mounted on the demo board (C6 and C7). These capacitors are necessary to block the 1/2 VDD DC bias and prevent it from flowing through the headphone speakers (DC current will destroy most audio speakers) while allowing the audio ac signal to pass through. The jack features a typical stereo headphone pinout.

LM4921ITL DEMO BOARD OPERATION

The LM4921ITL demo board is a complete evaluation platform (Parallel Port SPI Interface Card and control software available), designed to give easy access to the control pins of the part and comprise all the necessary external passive components. There are separate analog and digital supply connectors, SPI interface bus (J1) for the control lines, I²S interface bus (J2) for full-range digital audio, stereo headphone output (J3), and an external MCLK input (P1) for use in place of the crystal on the demoboard.

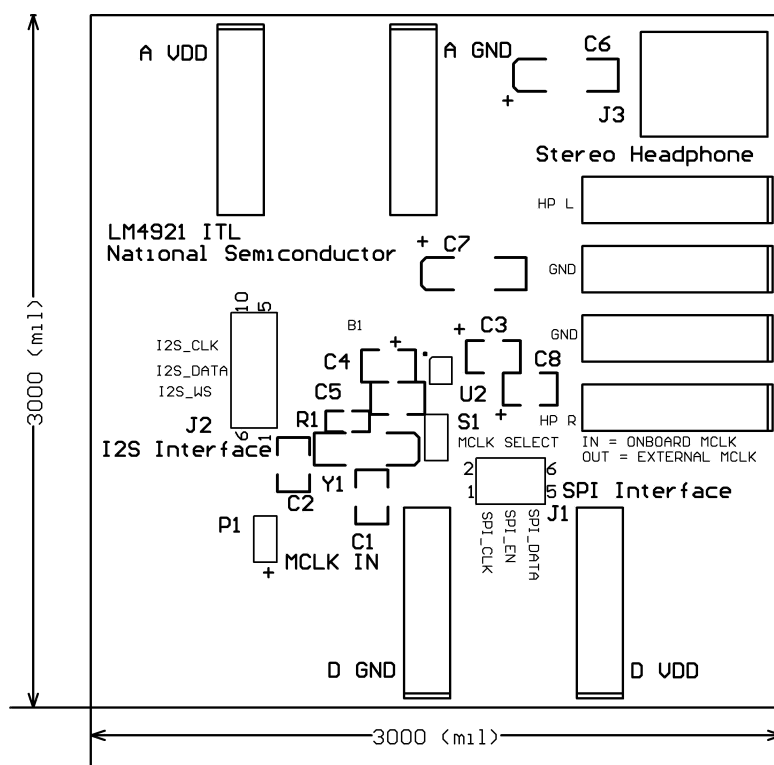

(1) Parallel Port SPI Interface Card and control software available.

REVISION HISTORY

Changes from Revision D (May 2013) to Revision E	Page
• Changed layout of National Data Sheet to TI format	20

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)	Op Temp (°C)	Top-Side Markings (4)	Samples
LM4921ITL/NOPB	ACTIVE	DSBGA	YZR	20	250	Green (RoHS & no Sb/Br)	SNAGCU	Level-1-260C-UNLIM	-40 to 85	G B9	Samples
LM4921ITLX/NOPB	ACTIVE	DSBGA	YZR	20	3000	Green (RoHS & no Sb/Br)	SNAGCU	Level-1-260C-UNLIM	-40 to 85	G B9	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
LM4921ITL/NOPB	DSBGA	YZR	20	250	178.0	8.4	2.34	2.85	0.76	4.0	8.0	Q1
LM4921ITLX/NOPB	DSBGA	YZR	20	3000	178.0	8.4	2.34	2.85	0.76	4.0	8.0	Q1

TAPE AND REEL BOX DIMENSIONS

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
