Data Sheet

Ambient Light Sensor

DESCRIPTION

The PH5504A2NA1 is an ambient light sensor with a photo diode and current amplifier. This product has spectral characteristics close to human eye sensitivity and outputs light current proportional to the ambient brightness.

The PH5504A2NA1 can be used to improve the performance and reduce the power consumption of digital equipment such as FPD-TV sets and mobile phones, by enabling automatic brightness control and automatic switching on and off of lighting systems.

FEATURES

• Small and thin SON package 2.55 x 1.56 x 0.55 mm

• Spectral characteristics close to human eye sensitivity Peak sensitivity wavelength 530 nm TYP.

The impact of infrared light can be reduced by incorporating infrared light correction circuits.

• Output characteristics proportional to illuminance

• Output light current 55 μ A TYP.@100 lx (Fluorescent light)

* Reduced variation of output current among light sources
* Low voltage operation $V_{CC} = 1.8$ to 5.5 V

Pb-free

APPLICATIONS

- FPD TV sets, displays
- Mobile phones, smartphones
- · Notebook PCs, tablet PCs
- DSCs, DVCs
- · FA equipment
- · Lighting systems, etc.

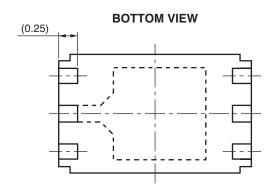

PACKAGE DIMENSIONS (UNIT: mm)

0.2

TOP VIEW

Remark Pin 1 is distinguishable by the shape of the lead frame.

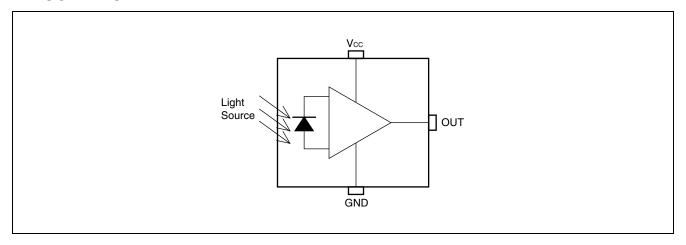

Remark () indicates nominal dimensions.

Pin No.	Terminal	
1	OUT	
2	GND	
3	V _{CC}	
4	NC	
5	NC	
6	NC	

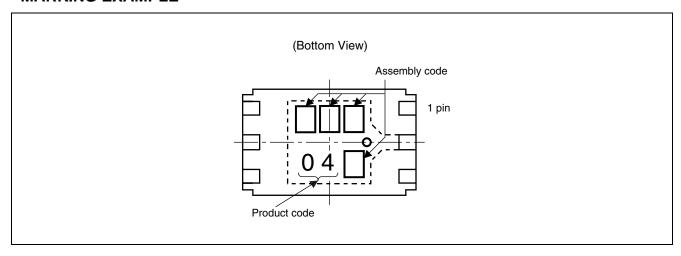

Remark 1. Connect all the NC terminals to GND or V_{CC} .

2. The bypass capacitor between V_{CC} and GND is to be mounted within 20 mm of the package body.

NOTES ON HANDLING

- Recommended reflow soldering conditions
 (including infrared reflow, convection reflow, and infrared + convection reflow)
 - (1) This product is dry-packed with desiccant in order to avoid moisture absorption.
 - (2) After breaking the seal, reflow soldering must be done within 168 hours under the recommended temperature profile shown below.
 - (3) If more than 168 hours have passed after breaking the seal, the baking process must be done by using a tape and reel

Baking conditions: Once, with tape and reel, 60±5°C, 10 to 24 hours

After the baking process, this product must be stored under conditions of 30°C or below, 70% RH or below, and reflow soldering must be done within 168 hours.

< Storage conditions after breaking seal >

• Storage conditions : 30°C or below, 70% RH or below

• Maximum storage period after breaking seal : 168 hours (Second reflow soldering must be completed

within 168 hours.)

< Reflow soldering conditions >

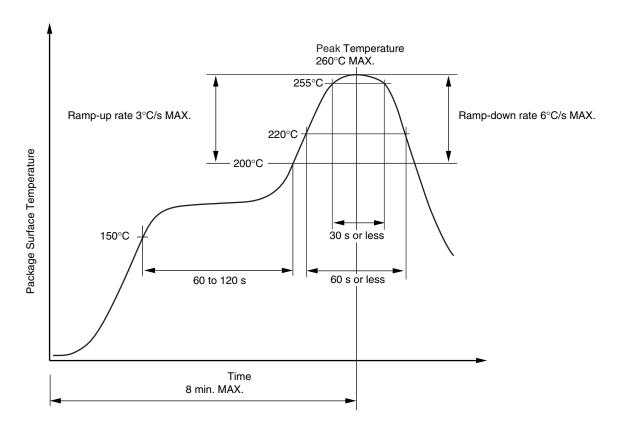

Peak reflow temperature : 260°C or below (Package surface temperature)

Maximum number of reflows : 2

• No repair by hand soldering

• Maximum chlorine content of rosin flux (percentage mass) : 0.2% or less

Recommended Temperature Profile of Reflow
