

Isolated 3.3V RS-485 Transceiver With Integrated Transformer Driver

Check for Samples: [ISO35T](#)

FEATURES

- 3000V_{RMS} / 4242V_{PK} Isolation
- Bus-Pin ESD Protection
 - 16 kV HBM Between Bus-Pins and GND2
 - 6 kV HBM Between Bus-Pins and GND1
- 1/8 Unit Load – Up to 256 Nodes on a Bus
- Designed for RS-485 and RS-422 Applications
- Signaling Rates up to 1 Mbps
- Thermal Shutdown Protection
- Typical Efficiency > 60% (I_{LOAD} = 100 mA)
 - see [sluu470](#)
- Low Driver Bus Capacitance 16 pF (Typ)
- 50 kV/μs Typical Transient Immunity
- UL 1577, IEC 60747-5-2 (VDE 0884, Rev. 2) Approvals Pending
- Fail-safe Receiver for Bus Open, Short, Idle
- Logic Inputs are 5-V Tolerant

APPLICATIONS

- Isolated RS-485/RS-422 Interfaces
- Factory Automation
- Motor/Motion Control
- HVAC and Building Automation Networks
- Networked Security Stations

DESCRIPTION

The ISO35T is an isolated differential line transceiver with integrated oscillator outputs that provide the primary voltage for an isolation transformer. The device is a full-duplex differential line transceiver for RS-485 and RS-422 applications that can easily be configured for half-duplex operation by connecting pin 11 to pin 14, and pin 12 to pin 13.

These devices are ideal for long transmission lines since the ground loop is broken to allow for a much larger common-mode voltage range. The symmetrical isolation barrier of the device is tested to provide 4242V_{PK} of isolation per VDE for 60s between the bus-line transceiver and the logic-level interface.

Any cabled I/O can be subjected to electrical noise transients from various sources. These noise transients can cause damage to the transceiver and/or near-by sensitive circuitry if they are of sufficient magnitude and duration. The ISO35T can significantly reduce the risk of data corruption and damage to expensive control circuits.

The ISO35T is specified for use from –40°C to 85°C.

FUNCTION DIAGRAM

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

NAME	PIN #	FUNCTION
D1	1	Transformer Driver Terminal 1, Open Drain Output
D2	2	Transformer Driver Terminal 2, Open Drain Output
GND1	3	Logic-side Ground
V _{CC1}	4	Logic-side Power Supply
R	5	Receiver Output
\overline{R}	6	Receiver Enable Input. This pin has complementary logic.
DE	7	Driver Enable Input
D	8	Driver Input
GND2	9, 15	Bus-side Ground. Both pins are internally connected.
NC	10	No Connect. This pin is not connected to any internal circuitry.
Y	11	Non-inverting Driver Output
Z	12	Inverting Driver Output
B	13	Inverting Receiver Input
A	14	Non-inverting Receiver Input
V _{CC2}	16	Bus-side Power Supply

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

				VALUE	UNIT	
V_{CC1}, V_{CC2}	Input supply voltage ⁽²⁾			−0.3 to 6	V	
V_A, V_B, V_Y, V_Z	Voltage at any bus I/O terminal (A, B, Y, Z)			−9 to 14	V	
V_{D1}, V_{D2}	Voltage at D1, D2			14	V	
$V_{(TRANS)}$	Voltage input, transient pulse through 100Ω, see Figure 12 (A,B,Y,Z)			−50 to +50	V	
V_I	Voltage input at any D, DE or \overline{RE} terminal			−0.5 to 7	V	
I_O	Receiver output current			±10	mA	
I_{D1}, I_{D2}	Transformer Driver Output Current			450	mA	
ESD	Electrostatic discharge	Human Body Model	JEDEC Standard 22, Test Method A114-C.01	Bus pins and GND1	±6	kV
				Bus pins and GND2	±16	kV
				All pins	±4	kV
		Charged Device Model	JEDEC Standard 22, Test Method C101	All pins	±1.5	kV
		Machine Model	ANSI/ESDS5.2-1996		±200	V
T_J	Maximum junction temperature			170	°C	
T_{STG}	Storage temperature			-65 to 150	°C	

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values except differential I/O bus voltages are with respect to network ground terminal and are peak voltage values.

RECOMMENDED OPERATING CONDITIONS

				MIN	TYP	MAX	UNIT
V_{CC1}, V_{CC2}	Supply Voltage			3.0	3.3	3.6	V
V_I or V_{IC}	Voltage at any bus terminal (separately or common-mode)			−7		12	V
V_{IH}	High-level input voltage			2		V_{CC}	V
V_{IL}	Low-level input voltage			0		0.8	V
V_{ID}	Differential input voltage			−12		12	V
R_L	Differential load resistance			54	60		Ω
I_O	Output Current			−60		60	mA
				−8		8	mA
T_A	Ambient temperature			−40		85	°C
T_J	Operating junction temperature			−40		150	°C
$1 / t_{UI}$	Signaling Rate					1	Mbps

SUPPLY CURRENT & COMMON MODE TRANSIENT IMMUNITY

over recommended operating conditions (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$I_{CC1}^{(1)}$ Logic-side quiescent supply current	DE & \overline{RE} = 0V or V_{CC1} (Driver and Receiver Enabled or Disabled), D = 0 V or V_{CC1} , No load		4.5	8	mA
$I_{CC2}^{(1)}$ Bus-side quiescent supply current	\overline{RE} = 0 V or V_{CC1} , DE = 0 V (driver disabled), No load		7.5	13	mA
	\overline{RE} = 0 V or V_{CC1} , DE = V_{CC1} (driver enabled), D = 0 V or V_{CC1} , No Load		9	16	mA
CMTI Common-mode transient immunity	See Figure 13	25	50		kV/μs

- (1) I_{CC1} and I_{CC2} are measured when device is connected to external power supplies, V_{CC1} & V_{CC2} . In this case, D1 & D2 are open and disconnected from external transformer.

IEC INSULATION AND SAFETY RELATED SPECIFICATIONS FOR 16-DW PACKAGE

over recommended operating conditions (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
L(I01) Minimum air gap (Clearance ⁽¹⁾)	Shortest terminal to terminal distance through air	8.3			mm
L(I02) Minimum external tracking (Creepage ⁽¹⁾)	Shortest terminal to terminal distance across the package surface	8.1			mm
CTI Tracking resistance(Comparative Tracking Index)	DIN IEC 60112 / VDE 0303 Part 1	400			V
Minimum Internal Gap (Internal Clearance)	Distance through the insulation	0.008			mm
R _{IO} Isolation resistance	Input to output, V _{IO} = 500 V, all pins on each side of the barrier tied together creating a two-terminal device	>10 ¹²			Ω
C _{IO} Barrier capacitance Input to output	V _{IO} = 0.4 sin (2πft), f = 1 MHz		2		pF
C _I Input capacitance to ground	V _I = V _{CC} /2 + 0.4 sin (2πft), f = 1 MHz, V _{CC} = 5 V		2		pF

- (1) Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed circuit board do not reduce this distance.

Creepage and clearance on a printed circuit board become equal according to the measurement techniques shown in the Isolation Glossary. Techniques such as inserting grooves and/or ribs on a printed circuit board are used to help increase these specifications

(1) Production tested ≥ 3000 V_{RMS} for 1 second in accordance with UL 1577.

IEC SAFETY LIMITING VALUES

Safety limiting intends to prevent potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the IO can allow low resistance to ground or the supply. Without current limiting, sufficient power is dissipated to overheat the die; and, damage the isolation barrier—potentially leading to secondary system failures.

PARAMETER	TEST CONDITIONS		MIN	TYP	MAX	UNIT
I _S Safety input, output, or supply current	DW-16	$\theta_{JA} = 80.5^{\circ}\text{C/W}$, V _I = 3.6V, T _J = 170°C, T _A = 25°C			500	mA
T _S Maximum case temperature					150	°C

The safety-limiting constraint is the absolute maximum junction temperature specified in the absolute maximum ratings table. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the Thermal Characteristics table is that of a device installed on the High-K Test Board for Leadless Surface Mount Packages. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

APPLICATION INFORMATION

REFERENCE DESIGN

ISO35T Reference design ([sluu470](#)) and miniature evaluation boards are available to provide a complete isolated data and power solution.

TRANSIENT VOLTAGES

Isolation of a circuit insulates it from other circuits and earth so that noise develops across the insulation rather than circuit components. The most common noise threat to data-line circuits is voltage surges or electrical fast transients that occur after installation and the transient ratings of ISO35T are sufficient for all but the most severe installations. However, some equipment manufacturers use their ESD generators to test transient susceptibility of their equipment and can easily exceed insulation ratings. ESD generators simulate static discharges that may occur during device or equipment handling with low-energy but very high voltage transients.

Figure 26 models the ISO35T bus IO connected to a noise generator. C_{IN} and R_{IN} is the device and any other stray or added capacitance or resistance across the A or B pin to GND2, C_{ISO} and R_{ISO} is the capacitance and resistance between GND1 and GND2 of ISO35T plus those of any other insulation (transformer, etc.), and we assume stray inductance negligible. From this model, the voltage at the isolated bus return is

$$V_{GND2} = V_N \frac{Z_{ISO}}{Z_{ISO} + Z_{IN}} \text{ and will always be less than 16 V from } V_N.$$

If ISO35T is tested as a stand-alone device, $R_{IN} = 6 \times 10^4 \Omega$, $C_{IN} = 16 \times 10^{-12} \text{ F}$, $R_{ISO} = 10^9 \Omega$ and $C_{ISO} = 10^{-12} \text{ F}$.

Note from **Figure 26** that the resistor ratio determines the voltage ratio at low frequency and it is the inverse capacitance ratio at high frequency. In the stand-alone case and for low frequency,

$$\frac{V_{GND2}}{V_N} = \frac{R_{ISO}}{R_{ISO} + R_{IN}} = \frac{10^9}{10^9 + 6 \times 10^4}$$

or essentially all noise appears across the barrier.

At very high frequency,

$$\frac{V_{GND2}}{V_N} = \frac{\frac{1}{C_{ISO}}}{\frac{1}{C_{ISO}} + \frac{1}{C_{IN}}} = \frac{1}{1 + \frac{C_{ISO}}{C_{IN}}} = \frac{1}{1 + \frac{1}{16}} = 0.94$$

and 94% of V_N appears across the barrier. As long as R_{ISO} is greater than R_{IN} and C_{ISO} is less than C_{IN} , most of transient noise appears across the isolation barrier, as it should.

We recommend the reader not test equipment transient susceptibility with ESD generators or consider product claims of ESD ratings above the barrier transient ratings of an isolated interface. ESD is best managed through recessing or covering connector pins in a conductive connector shell and installer training.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)	Op Temp (°C)	Top-Side Markings (4)	Samples
ISO35TDW	ACTIVE	SOIC	DW	16	40	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-40 to 85	ISO35TDW	Samples
ISO35TDWR	ACTIVE	SOIC	DW	16	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-40 to 85	ISO35TDW	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
ISO35TDWR	SOIC	DW	16	2000	330.0	16.4	10.75	10.7	2.7	12.0	16.0	Q1

TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
ISO35TDWR	SOIC	DW	16	2000	367.0	367.0	38.0

DW (R-PDSO-G16)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in inches (millimeters). Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15).
 - D. Falls within JEDEC MS-013 variation AA.

DW (R-PDSO-G16)

PLASTIC SMALL OUTLINE

4209202-7/F 08/13

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Refer to IPC7351 for alternate board design.
 - Solder mask tolerances between and around signal pads can vary based on board fabrication site.
 - Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
 - Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
