1 **Overview**

This document is intended to guide users step-by-step through the AFE5807EVM Evaluation Module (EVM) setup and test . The EVM is shipped with a default configuration from the manufacturer. With this configuration, the onboard CMOS clock is used for a analog-to-digital converter sampling clock; the onboard oscillator is used for CW mode operation. No external clock generator is required. Users need to provide the input signal for measurement from a signal generator.

Detail explanation regarding the jumpers, connectors, and test points appear in Section 12. The graphical user interface (GUI) can be downloaded from the TI Web site.

Default Configuration 2

Figure 1 shows the default configuration of the EVM from the factory. The accompanying list identifies the basic components on the EVM board.

Figure 1. AFE5807EVM Basic Configuration

- 1. P1 Power supplies connector.
- 2. JP1, JP2, and JP3 are set to enable 3.3-V, 1.8-V, and 5-V power supplies to device.
- 3. JP9: enables onboard CMOS clock.
- 4. JP10: Power supply for onboard CMOS clock oscillator.
- 5. JP15: Enables onboard VCNT.
- 6. JP31 always set as Figure 1.

3 Software Installation and Operation

The AFE5807EVM GUI (<u>SLOC254</u>) can be downloaded from the TI Web site. Follow the directions in Read Me First.pdf file to install GUI and device driver

4 Test Setup

Two EVMs are required to evaluate the AFE5807 device. The following illustration shows the exact setup of these two boards and external connectors. For the default configuration as shown in Figure 1, it is unnecessary to have an external sampling clock and external Vcntl supply. The onboard CMOS clock and onboard Vcntl are used.

Figure 2. HW Setup With Connection Between TSW1250EVM and AFE5807

5 Power Up AFE5807

Power up the AFE5807EVM by applying +5 V and –5 V to the P1 connector. After power up is complete, four green LEDS and two red LEDS are turned on as shown in the following illustration.

6 Launch AFE5807 GUI

Launch the AFE5807 graphic user interface (GUI), which appears in the following illustration. After the GUI has completely launched, LED41 and LED42 go off and the rest of the LEDS remain on. The GUI automatically configures the default setup. Select the ADC page to observe the default condition.

				,	,	

The following illustration shows the Default Condition on the ADC page.

7 Launch TSW1250 GUI

Launch the TSW1250 GUI. The Message window displays the following message to indicate that the setup of the TSW1250EVM and AFE5807EVM is working properly. If a different message or an error message appears, contact TI FAE.

Select AFE5807, 12 bits, MSB first from the GUI.

ADC Sampling Rate is fixed at 40 MHz; this is the onboard CMOS clock frequency.

ADC Input Frequency – enter 2M, and the GUI calculates the real coherent frequency to 2.00439453M.

8 **TEST AFE5807**

8.1 Step 1: Time Domain

- Select the Time Domain page from the TSW1250 GUI.
- Uncheck Overlay unwrap waveform.

• From the AFE5807 GUI, go to the **ADC** page, and then select **Ramp**.

TEST AFE5807

AFE5807EVM

- Press the Capture button on the TSW1250 GUI. This displays a ramping waveform on the TSW1250 GUI display area as shown in the following illustration.
- Repeat for Channel 2 and Channel 8.
- If each channel has the output as shown in the following illustration, proceed with the next step; otherwise, contact the TI FAE to troubleshoot the problem.
- On the AFE5807 GUI, change Test Pattern from **Ramp** to **None** for the next step.

8.2 Step 2: Single Tone FFT

- Select the Single Tone FFT page at the TSW1250 GUI.
- Connect Channel 1 of the AFE5807EVM to a signal generator through an LP filter. If an LP filter is not present, the result will not be good.
- Set the amplitude of the signal generator to -25dBm.
- Set the frequency of the signal generator to 2.00439453M to match the GUI.
- Change the window option to **Hanning**. This is because the input signal and the onboard CMOS clock are noncoherent.
- Press the Capture button to get the test result.
- Repeat for Channel 2 through Channel 8.

TEST AFE5807

Figure 3. User Interface: Single FFT Format

9 Hardware Setup, CW Mode

Figure 4. Setup for CW Mode

9.1 Step 1: Switch to CW Mode.

- Go to the CW Mode page.
- Check **CW Mode Enable**. The LED41, LED42, and LED43 on AFE5807EVM all illuminate.
- Select **500** Ω for the gain control feedback resistor.

Figure 5. Switching From Default (ADC) Mode Panel to CW Mode Panel

Hardware Setup, CW Mode

www.ti.com

9.2 Step 2: Apply input and observe outputs.

- Apply an analog signal (2.51 M, -10 dBm) to any analog input SMA.
- The CW outputs (J12, J13) display the frequency I and Q signals at 10 kHz as shown in Figure 6. The GUI Gain Control Feedback Resistor can be used to vary the amplitude of the outputs.

Figure 6. CW Outputs

9.3 External Clock for CW Mode

The CW mode clocks can be supplied from J9 (X16/X8/X4/X1) and J10 (X1) using external signal generators. The manufacture default setup uses ON BOARD CLOCK, with which C154, C155, C156, and C157 are installed. To switch to an external clock, these four capacitors must be uninstalled and capacitors C49,C50,C52, and C53 must be installed. The following table shows the configuration for these eight capacitors.

Capacitor	Onboard Clock	External Clock	Comments
C49	Uninstalled	Installed	Top layer of the EVM
C50	Uninstalled	Installed	Bottom layer of the EVM
C52	Uninstalled	Installed	Bottom layer of the EVM
C53	Uninstalled	Installed	Top layer of the EVM
C154	Installed	Uninstalled	Top layer of the EVM
C155	Installed	Uninstalled	Top layer of the EVM
C156	Installed	Uninstalled	Top layer of the EVM
C157	Installed	Uninstalled	Top layer of the EVM

Table 1. Configuration for Clock Capacitors

Figure 8. Relevant Capacitors for CW Mode, Bottom Side

10 External ADC Sampling Clock

To use the external clock generator to test the AFE5807, perform the following steps.

- 1. Reconfigure JP9 as shown in the following illustration. The rest of the jumpers remain the same.
- 2. Connect the external generator as shown in Figure 9.
- 3. Set the generator output to 40 MHz, 13 dBm.

Figure 9. External ADC Sampling Clock Configuration

4. If the generators for the ADC clock and input signal are synchronous, then choose *Rectangular* as the Windowing option; otherwise, use *Hanning* or *Hamming*.

11 External Vcntl

- JP15 needs to be reconfigured to short the leftmost two pins.
- A power supply is required to be connected as shown in Figure 10.

Figure 10. External Vcntl Configuration

12 Board Configuration

Figure 11. I/O, PWR, and USB Connector

Table 2. Input/Output, Power, and USB

Connector	Description
J1 through J8	Analog Input signals for Ch1 through Ch8. Connect to a signal generator. A bandpass filter must be applied between the generator and the SMA to get a better result. (See Figure 1 .)
P1/JP6	P1 is the +5-V and –5-V power supply connector. JP6 is the test point for +5-V/-5-V power supply.
JP3	Onboard 5-V enable. Set up as Figure 2 is a must to use onboard 5-V supply.
XP-5V	-5-V supply test point.
TP5V	+5-V supply test point.
JP1	Onboard +1.8-V enable. Set up as shown in Figure 2; required to use the onboard +1.8 V.
JP2	Onboard 3.3-VA enable. Set up as shown in Figure 2; required to use the onboard 3.3 V.
TP18VD	+1.8-VD supply test point.
TP33VD	+3.3-VD supply test point.
TP33VA	+3.3-VA supply test point.
TP1 through TP4	Ground test points.
USB1	USB interface connector
JP18	Test points for USB data bus: From pin 1 to pin 9 the signals are: D0, D4, D2, D1, D7, D5, D6, and D3

12.2 CW Mode, ADC Clock

Figure 12. AFE5807EVM Jumper Locations

Table 3. CW Mode, ADC Clock

Clock Type	Reference Designator	Description						
	J9/J10	External CW Mode clock. The default is using onboard oscillator.						
	J12	CW output for I-channel via an external operational amplifier. The EVM has converted the differential signal CW_IP_OUTP and CW_IP_OUTM into this single-ended output through an operational amplifier.						
CW/ Modo	51 52/51 55	To observe CW_IP_OUTP and CW_IP_OUTM before the external operational amplifier, the user can probe JP52 and JP53.						
	J13	CW output for V-channel via an external operational amplifier. The EVM has converted the differential signal CW_VP_OUTP and CW_VP_OUTM into this single-ended output through an operational amplifier.						
	JF30/JF37	To observe CW_VP_OUTP and CW_VP_OUTM before the external operational amplifier, the user can probe JP56 and JP57.						
	JX1	This connector allows the user to see signals of J12 and J13 simultaneously.						
	JP9/JP10	JP9 selects on_board_ADC CMOS clock or external clock from J14. Default setup in Figure 4 us onboard CMOS clock. Set it to the other side to use the external clock source.						
ADC		Short to power up onboard CMOS clock.						
	J14	External ADC clock Input.						

12.3 Vcntl Control Input

Figure 13. Vcntl

Table 4. CW Mode and Vcntl

Connector	Description
JP15	Choose onboard Vcntl or external Vcntl. The default setup uses onboard Vcntl.
J14	External Vcntl input. The range is from 0 V to 1.5 V.
VR2	Onboard Vcntl adjustment. Use JP15 pin 3 which has the text On-Board to monitor the Vcntl voltage level.

12.4 LEDs

The AFE5807EVM has seven LEDs. Their locations are shown in Figure 14. Their ON/OFF states demonstrate the normal operation of the power supplies and the PLL status of the clock buffer.

Figure 14. AFE5807EVM LED Location

Evaluation Board/Kit Important Notice

Texas Instruments (TI) provides the enclosed product(s) under the following conditions:

This evaluation board/kit is intended for use for ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY and is not considered by TI to be a finished end-product fit for general consumer use. Persons handling the product(s) must have electronics training and observe good engineering practice standards. As such, the goods being provided are not intended to be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including product safety and environmental measures typically found in end products that incorporate such semiconductor components or circuit boards. This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and therefore may not meet the technical requirements of these directives or other related directives.

Should this evaluation board/kit not meet the specifications indicated in the User's Guide, the board/kit may be returned within 30 days from the date of delivery for a full refund. THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies TI from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge.

EXCEPT TO THE EXTENT OF THE INDEMNITY SET FORTH ABOVE, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

TI currently deals with a variety of customers for products, and therefore our arrangement with the user is not exclusive.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein.

Please read the User's Guide and, specifically, the Warnings and Restrictions notice in the User's Guide prior to handling the product. This notice contains important safety information about temperatures and voltages. For additional information on TI's environmental and/or safety programs, please contact the TI application engineer or visit www.ti.com/esh.

No license is granted under any patent right or other intellectual property right of TI covering or relating to any machine, process, or combination in which such TI products or services might be or are used.

FCC Warning

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

EVM Warnings and Restrictions

It is important to operate this EVM within the input voltage range of -3 V to 6 V and the output voltage range of -3 V to 6 V .

Exceeding the specified input range may cause unexpected operation and/or irreversible damage to the EVM. If there are questions concerning the input range, please contact a TI field representative prior to connecting the input power.

Applying loads outside of the specified output range may result in unintended operation and/or possible permanent damage to the EVM. Please consult the EVM User's Guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative.

During normal operation, some circuit components may have case temperatures greater than 25° C. The EVM is designed to operate properly with certain components above 50° C as long as the input and output ranges are maintained. These components include but are not limited to linear regulators, switching transistors, pass transistors, and current sense resistors. These types of devices can be identified using the EVM schematic located in the EVM User's Guide. When placing measurement probes near these devices during operation, please be aware that these devices may be very warm to the touch.

Mailing Address: Texas Instruments, Post Office Box 655303, Dallas, Texas 75265 Copyright © 2012, Texas Instruments Incorporated

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
