## QUADRUPLE LOW-POWER LINE DRIVERS

SLLS051C – JULY 1990 – REVISED MARCH 1997

- Meets ANSI EIA/TIA-232-E and ITU Recommendation V.28
- Very Low Supply Current
- Sleep Mode:  
3-State Outputs in High-Impedance State  
Ultra-Low Supply Current . . . 17  $\mu$ A Typ
- Improved Functional Replacement for:  
SN75188,  
Motorola MC1488,  
National Semiconductor DS14C88, and  
DS1488
- CMOS- and TTL-Compatible Data Inputs
- On-Chip Slew-Rate Limit . . . 30 V/ $\mu$ s
- Output Current Limit . . . 10 mA Typ
- Wide Supply Voltage Range . . .  $\pm 4.5$  V to  $\pm 15$  V

NOT RECOMMENDED FOR NEW DESIGNS

### description

The SN75C198 is a monolithic low-power BI-MOS device containing four low-power line drivers designed to interface data terminal equipment (DTE) with data circuit-terminating equipment (DCE) in conformance with the specifications of ANSI EIA/TIA-232-E. The drivers of the SN75C198 are similar to those of the SN75C188 quadruple driver. The drivers have a controlled-output slew rate that is limited to a maximum of 30 V/ $\mu$ s. This feature eliminates the need for external components.

The sleep-mode input,  $\overline{SM}$ , can switch the outputs to high impedance, which avoids the transmission of corrupted data during power-up and allows significant system power savings during data-off periods.

The SN75C198 is characterized for operation from 0°C to 70°C.

FUNCTION TABLE

INPUTS			OUTPUT Y
$\overline{SM}$	A	B	
H	H	H	L
H	L	X	H
H	X	L	H
L	X	X	Z

H = high level, L = low level,  
X = irrelevant, Z = high impedance

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

## QUADRUPLE LOW-POWER LINE DRIVERS

SLLS051C – JULY 1990 – REVISED MARCH 1997

### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)<sup>†</sup>

Supply voltage, $V_{CC+}$ (see Note 1)	15 V
Supply voltage, $V_{CC-}$	–15 V
Input voltage range, $V_I$	–15 V to 15 V
Output voltage range, $V_O$	$V_{CC-} - 6\text{ V}$ to $V_{CC+} + 6\text{ V}$
Continuous total power dissipation	See Dissipation Rating Table
Operating free-air temperature range, $T_A$ : SN75C198	0°C to 70°C
Storage temperature range, $T_{stg}$	–65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C

<sup>†</sup> Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltages are with respect to the network ground terminal.

DISSIPATION RATING TABLE

PACKAGE	$T_A \leq 25^\circ\text{C}$ POWER RATING	DERATING FACTOR ABOVE $T_A = 25^\circ\text{C}$	$T_A = 70^\circ\text{C}$ POWER RATING
D	950 mW	7.6 mW/°C	608 mW
N	1150 mW	9.2 mW/°C	730 mW

### recommended operating conditions

	MIN	NOM	MAX	UNIT
Supply voltage, $V_{CC+}$	4.5	12	15	V
Supply voltage, $V_{CC-}$	–4.5	–12	–15	V
Input voltage, $V_I$ (see Figure 2)	$V_{CC-} + 2$		$V_{CC+}$	V
High-level input voltage, $V_{IH}$	2			V
Low-level input voltage, $V_{IL}$	A and B inputs			0.8
	SM input			0.6
Operating free-air temperature, $T_A$	0		70	°C

**electrical characteristics over recommended operating free-air temperature range,  $V_{CC\pm} = \pm 12$  V,  $\overline{SM}$  at 2 V (unless otherwise noted)**

PARAMETER		TEST CONDITIONS		MIN	TYP†	MAX	UNIT
$V_{OH}$	High-level output voltage	$V_{IH} = 0.8$ V, $R_L = 3$ k $\Omega$	$V_{CC\pm} = \pm 5$ V	4			V
			$V_{CC\pm} = \pm 12$ V	10			
$V_{OL}$	Low-level output voltage (see Note 2)	$V_{IH} = 2$ V, $R_L = 3$ k $\Omega$	$V_{CC\pm} = \pm 5$ V			–4	V
			$V_{CC\pm} = \pm 12$ V			–10	
$I_{IH}$	High-level input current	$V_I = 5$ V				10	$\mu$ A
$I_{IL}$	Low-level input current	$V_I = 0$ V				–10	$\mu$ A
$I_{OZ}$	High-impedance-state output current	$\overline{SM}$ at 0.6 V	$V_O = 12$ V, $V_{CC\pm} = \pm 12$ V			100	$\mu$ A
			$V_O = -12$ V, $V_{CC\pm} = \pm 12$ V			–100	
$I_{OS(H)}$	High-level short-circuit output current‡	$V_I = 0.8$ V, $V_O = 0$ or $V_{CC-}$		–4.5	–10	–19.5	mA
$I_{OS(L)}$	Low-level short-circuit output current‡	$V_I = 2$ V, $V_O = 0$ or $V_{CC+}$		4.5	10	19.5	mA
$r_o$	Output resistance	$V_{CC\pm} = 0$ , $V_O = -2$ V to 2 V		300			$\Omega$
$I_{CC+}$	Supply current from $V_{CC+}$	A and B inputs at 0.8 V or 2 V, No load	$V_{CC\pm} = \pm 5$ V		90	160	$\mu$ A
			$V_{CC\pm} = \pm 12$ V		95	160	
		A and B inputs at 0.8 V or 2 V, $R_L = 3$ k $\Omega$ , $\overline{SM}$ at 0.6 V	$V_{CC\pm} = \pm 5$ V		40		
			$V_{CC\pm} = \pm 12$ V		40		
$I_{CC-}$	Supply current from $V_{CC-}$	A and B inputs at 0.8 V or 2 V, No load	$V_{CC\pm} = \pm 5$ V		–90	–160	$\mu$ A
			$V_{CC\pm} = \pm 12$ V		–95	–160	
		A and B inputs at 0.8 V or 2 V, $R_L = 3$ k $\Omega$ , $\overline{SM}$ at 0.6 V	$V_{CC\pm} = \pm 5$ V		–40		
			$V_{CC\pm} = \pm 12$ V		–40		

† All typical values are at  $T_A = 25^\circ\text{C}$ .

‡ Not more than one output should be shorted at a time.

NOTE 2: The algebraic convention, where the more positive (less negative) limit is designated as maximum, is used in this data sheet for logic levels only, e.g., if –10 V is a maximum, the typical value is a more negative voltage.

**switching characteristics over recommended operating free-air temperature range,  $V_{CC\pm} = \pm 12$  V (unless otherwise noted)**

PARAMETER		TEST CONDITIONS		MIN	TYP†	MAX	UNIT
$t_{PLH}$	Propagation delay time, low- to high-level output§	$R_L = 3$ k $\Omega$ to 7 k $\Omega$ , See Figure 1	$C_L = 15$ pF,			3	$\mu$ s
$t_{PHL}$	Propagation delay time, high- to low-level output§					3.5	$\mu$ s
$t_{TLH}$	Transition time, low- to high-level output¶			0.53	1	3.2	$\mu$ s
$t_{THL}$	Transition time, high- to low-level output¶			0.53	1	3.2	$\mu$ s
$t_{TLH}$	Transition time, low- to high-level output#	$R_L = 3$ k $\Omega$ to 7 k $\Omega$ , See Figure 2	$C_L = 2500$ pF,		1.5		$\mu$ s
$t_{THL}$	Transition time, high- to low-level output#				1.5		$\mu$ s
$t_{PZH}$	Output enable time to high level	$R_L = 3$ k $\Omega$ to 7 k $\Omega$ , See Figure 3	$C_L = 15$ pF,			50	$\mu$ s
$t_{PHZ}$	Output disable time from high level					10	$\mu$ s
$t_{PZL}$	Output enable time to low level	$R_L = 3$ k $\Omega$ to 7 k $\Omega$ , See Figure 4	$C_L = 15$ pF,			15	$\mu$ s
$t_{PLZ}$	Output disable time from low level					10	$\mu$ s
SR	Output slew rate#	$R_L = 3$ k $\Omega$ to 7 k $\Omega$ , $C_L = 15$ pF		6	15	30	V/ $\mu$ s

† All typical values are at  $T_A = 25^\circ\text{C}$ .

§  $t_{PHL}$  and  $t_{PLH}$  include the additional time due to on-chip slew rate and are measured at the 50% points.

¶ Measured between 10% and 90% points of output waveform

# Measured between 3-V and –3-V points of output waveform

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
- D. Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
- E. Reference JEDEC MS-012 variation AB.

D (R-PDSO-G14)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate designs.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46C and to discontinue any product or service per JESD48B. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components which meet ISO/TS16949 requirements, mainly for automotive use. Components which have not been so designated are neither designed nor intended for automotive use; and TI will not be responsible for any failure of such components to meet such requirements.
