

STEREO DIGITAL AUDIO LIP-SYNC DELAY

FEATURES

- Digital Audio Format: 16-24-bit I²S
- Single Serial Input Port
- Delay Time: 170 ms/ch at $f_s = 48$ kHz
- Delay Resolution: 256 samples
- Delay Memory Cleared on Power-Up or After Delay Changes
 - Eliminates Erroneous Data From Being Output
- 3.3 V Operation With 5 V Tolerant I/O
- Supports Audio Bit Clock Rates of 32 to 64 fs with $f_s = 32$ kHz–192 kHz
- No External Crystal or Oscillator Required
 - All Internal Clocks Generated From the Audio Clock
- Surface Mount 4mm × 4mm, 16-pin QFN Package

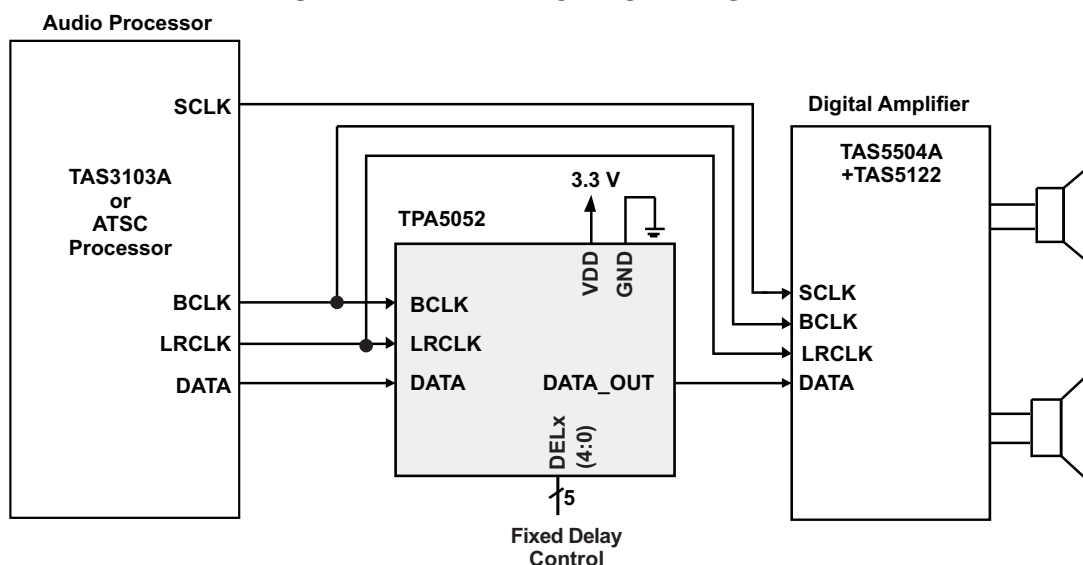

APPLICATIONS

- High Definition TV Lip-Sync Delay
- Flat Panel TV Lip-Sync Delay
- Home Theater Rear-Channel Effects
- Wireless Speaker Front-Channel Synchronization
- Camcorders

DESCRIPTION

The TPA5052 accepts a single serial audio input, buffers the data for a selectable period of time, and outputs the delayed audio data on a single serial output. In systems with complex video processing algorithms, one device allows delay of up to 170 ms/ch ($f_s = 48$ kHz) to synchronize the audio stream to the video stream. If more delay is needed, the devices can be connected in series.

SIMPLIFIED APPLICATION DIAGRAM

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

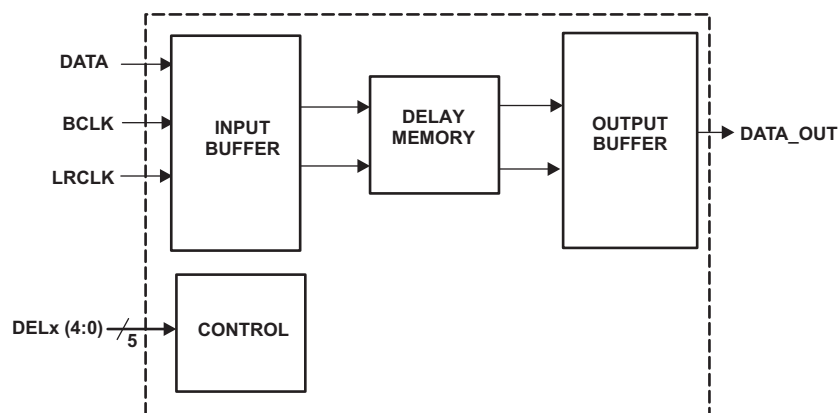

PIN DESCRIPTIONS

TERMINAL FUNCTIONS

| TERMINAL | | I/O | DESCRIPTION |
|-------------|--------|-----|--|
| NAME | NO. | | |
| DEL0 | 10 | I | Delay select pin – LSB. 5V tolerant input. |
| DEL1 | 11 | I | Delay select pin. 5V tolerant input. |
| DEL2 | 12 | I | Delay select pin. 5V tolerant input. |
| DEL3 | 3 | I | Delay select pin. 5V tolerant input. |
| DEL4 | 4 | I | Delay select pin - MSB. 5V tolerant input. |
| BCLK | 16 | I | Audio data bit clock input for serial input. 5V tolerant input. |
| DATA | 2 | I | Audio serial data input for serial input. 5V tolerant input. |
| DATA_OUT | 15 | O | Delayed audio serial data output. |
| GND | 5–9 | P | Ground – All ground terminals must be tied to GND for proper operation |
| LRCLK | 1 | I | Left and Right serial audio sampling rate clock (fs). 5V tolerant input. |
| VDD | 13, 14 | P | Power supply interface. Both pins must be tied to power supply. |
| Thermal Pad | | - | Connect to ground. Must be soldered down in all applications to properly secure device on the PCB. |

Figure 1. Serial Data Interface Timing

APPLICATION INFORMATION

AUDIO SERIAL INTERFACE

The audio serial interface for the TPA5052 consists of a 3-wire synchronous serial port. It includes LRCLK, BCLK, and DATA. BCLK is the serial audio bit clock, and it is used to clock the serial data present on DATA into the serial shift register of the audio interface. Serial data is clocked into the TPA5052 on the rising edge of BCLK. LRCLK is the serial audio left/right word clock. It is used to latch serial data into the internal registers of the serial audio interface. LRCLK is operated at the sampling frequency, f_s . BCLK can be operated at 32 to 64 times the sampling frequency for I²S formats. A system clock is not necessary for the operation of the TPA5052.

I²S TIMING

The I²S data format diagram is shown in [Figure 2](#).

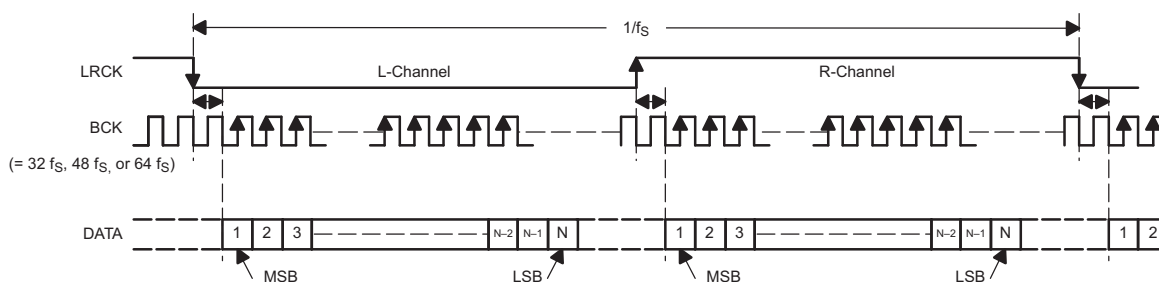

Figure 2. I²S Data Format; L-Channel = LOW, R-Channel = HIGH

GENERAL DELAY OPERATION

The delay of the TPA5052 is set using the 5 delay pins (DEL4, DEL3, DEL2, DEL1, DEL0). The minimum delay is 255 samples, and occurs when all five pins are at logic 0. The maximum delay is 8191 samples, and occurs when all five pins are at logic 1. The delay can be increased by changing the values on each pin from a 0 to a 1. See [Table 1](#). Delay pin DEL4 is the MSB, and DEL0 is the LSB.

The delay is calculated with the following formula:

$$\text{Audio Delay (in samples)} = 4096 \times (\text{DEL4}) + 2048 \times (\text{DEL3}) + 1024 \times (\text{DEL2}) + 512 \times (\text{DEL1}) + 256 \times (\text{DEL0}) + 255$$

$$\text{Audio Delay (ms)} = \text{Audio Delay (in samples)} \times (1/f_s)$$

Both channels have the same amount of delay. They cannot be controlled individually.

Table 1. Delay Settings

| DEL4 | DEL3 | DEL2 | DEL1 | DEL0 | Delay in Samples |
|------|------|------|------|------|------------------|
| 0 | 0 | 0 | 0 | 0 | 255 |
| 0 | 0 | 0 | 0 | 1 | 511 |
| 0 | 0 | 0 | 1 | 0 | 767 |
| 0 | 0 | 0 | 1 | 1 | 1023 |
| ↓ | ↓ | ↓ | ↓ | ↓ | ↓ |
| 1 | 1 | 1 | 1 | 1 | 8191 |

TPA5052 Operation

Only a single decoupling capacitor ($0.1\ \mu\text{F}$ – $1\ \mu\text{F}$) is required across VDD and GND. The DELx terminals can be directly connected to VDD or GND. [Table 1](#) describes the delay settings selectable via the DELx terminals. A schematic implementation of the TPA5052 is shown in [Figure 3](#).

Figure 3. TPA5052 Schematic

COMPLETE UPDATE

To avoid pops and clicks in the audio stream when the delay is changed, the TPA5052 holds each channel in an internal mute mode until all the set number of samples have passed. For example, if the delay is set to 511 samples, the TPA5052 holds each channel in mute until all 511 samples of audio data have passed.

APPLICATION EXAMPLES

Connecting Two Devices in Series to Increase the Delay

It is sometimes desirable to increase the delay time beyond the limit which one device provides. In such cases, the TPA5052 device can be placed in a series to increase the delay. See [Figure 4](#) for an example.

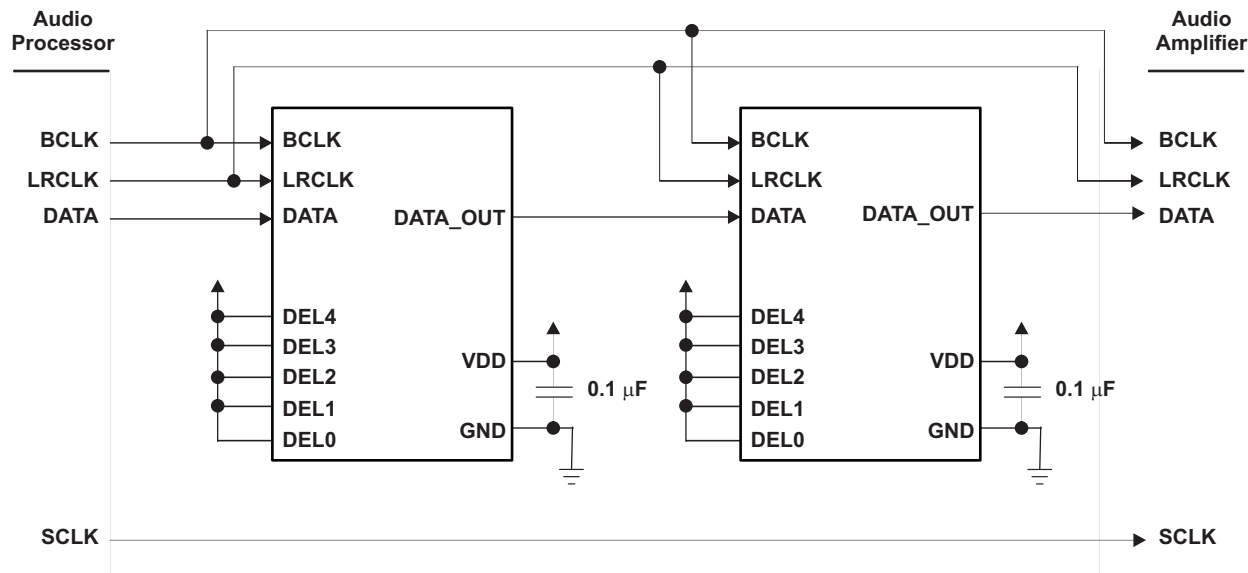

Figure 4. Two Devices in Series

DEVICE CURRENT CONSUMPTION

The TPA5052 draws different amounts of supply current depending upon the conditions under which it is operated. As V_{DD} increases, so too does I_{DD} . Likewise, as V_{DD} decreases, I_{DD} decreases. The same is true of the sampling frequency, f_s . An increase in f_s causes an increase in I_{DD} . [Figure 5](#) illustrates the relationship between operating condition and typical supply current.

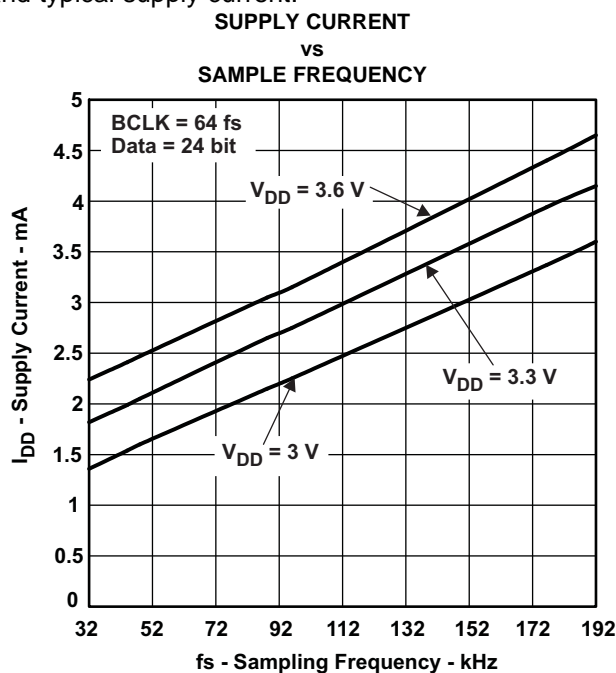

Figure 5. Typical Supply Current

PACKAGING INFORMATION

| Orderable Device | Status (1) | Package Type | Package Drawing | Pins | Package Qty | Eco Plan (2) | Lead/Ball Finish | MSL Peak Temp (3) | Op Temp (°C) | Top-Side Markings (4) | Samples |

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PLASTIC QUAD FLATPACK NO-LEAD

4205141/D 06/11

- NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - This drawing is subject to change without notice.
 - Quad Flatpack, No-leads (QFN) package configuration.
 - The package thermal pad must be soldered to the board for thermal and mechanical performance.
 - See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
 - Falls within JEDEC MO-220.

RSA (S-PVQFN-N16)

PLASTIC QUAD FLATPACK NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

Bottom View

RSA (S-PVQFN-N16)

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, QFN Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - F. Customers should contact their board fabrication site for solder mask tolerances.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
